INDEPENDENT AUDITOR'S REPORT

Teachers' Retirement Board of the California
State Teachers' Retirement System
West Sacramento, California

Report on the Audit of the Financial Statements

Opinion

We have audited the financial statements of the California State Teachers' Retirement System ("System" or "CalSTRS"), a component unit of the State of California, as of and for the year ended June 30, 2026, and the related notes to the financial statements, which collectively comprise the System's basic financial statements as listed in the table of contents.

In our opinion, the accompanying financial statements referred to above present fairly, in all material respects, the fiduciary net position of the California State Teachers' Retirement System, as of June 30, 2026, and the changes in fiduciary net position for the year then ended in accordance with accounting principles generally accepted in the United States of America.

Basis for Opinion

We conducted our audit in accordance with auditing standards generally accepted in the United States of America (GAAS) and the standards applicable to financial audits contained in *Government Auditing Standards*, issued by the Comptroller General of the United States *(Government Auditing Standards)*. Our responsibilities under those standards are further described in the Auditor's Responsibilities for the Audit of the Financial Statements section of our report. We are required to be independent of the System, and to meet our other ethical responsibilities, in accordance with the relevant ethical requirements relating to our audit. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Emphasis of Matters

Net Pension Liability of Employers and Nonemployer Contributing Entity

As discussed in Note 3, based on the most recent actuarial valuation as of June 30, 2025, the System's independent actuaries determined that, at June 30, 2026, the value of the State Teachers' Retirement Plan (STRP) total pension liability exceeded the STRP fiduciary net position by $32.5 billion. The actuarial valuation is sensitive to the underlying actuarial assumptions, including investment rate of return of 7.10%, consumer price inflation of 2.75%, wage growth of 3.5% and custom mortality tables based on CalSTRS most recent Experience Analysis. Our opinion is not modified with respect to this matter.

Fair Value of Investments

As discussed in Note 5 and 6, the financial statements include investments valued at approximately $175.7 billion as of June 30, 2026, for which fair value has been estimated by general partners and investment advisors, and reviewed and approved by the System's management, in the absence of readily ascertainable market values. Because of the inherent uncertainty of valuation, the estimated values may differ from the values that would have been used had a ready market existed for the investment securities, and the differences could be material. Our opinion is not modified with respect to this matter.

Responsibilities of Management for the Financial Statements

Management is responsible for the preparation and fair presentation of the financial statements in accordance with accounting principles generally accepted in the United States of America, and for the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is required to evaluate whether there are conditions or events, considered in the aggregate, that raise substantial doubt about the System's ability to continue as a going concern for twelve months beyond the financial statement date, including any currently known information that may raise substantial doubt shortly thereafter.

Auditor's Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance but is not absolute assurance and therefore is not a guarantee that an audit conducted in accordance with GAAS and *Government Auditing Standards* will always detect a material misstatement when it exists. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control. Misstatements are considered material if there is a substantial likelihood that, individually or in the aggregate, they would influence the judgment made by a reasonable user based on the financial statements.

In performing an audit in accordance with GAAS and *Government Auditing Standards*, we

- Exercise professional judgment and maintain professional skepticism throughout the audit.
- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, and design and perform audit procedures responsive to those risks. Such procedures include examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the System's internal control. Accordingly, no such opinion is expressed.
- Evaluate the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluate the overall presentation of the financial statements.
- Conclude whether, in our judgment, there are conditions or events, considered in the aggregate, that raise substantial doubt about the System's ability to continue as a going concern for a reasonable period of time.

We are required to communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit, significant audit findings, and certain internal control-related matters that we identified during the audit.

Required Supplementary Information

Accounting principles generally accepted in the United States of America require that the Management's discussion and analysis on pages 4-18 and the Schedule of changes in net pension liability of employers and nonemployer contributing entity, Schedule of net pension liability of employers and nonemployer contributing entity, Schedule of pension contributions from employers and nonemployer contributing entity, Schedule of money-weighted rate of return for the State Teachers' Retirement Plan and Medicare Premium Payment Program, Schedule of changes in net OPEB liability of employers and Schedule of net OPEB liability of employers on pages 57 – 64 be presented to supplement the basic financial statements. Such information is the responsibility of management and, although not a part of the basic financial statements, is required by the Governmental Accounting Standards Board who considers it to be an essential part of financial reporting for placing the basic financial statements in an appropriate operational, economic, or historical context.

We have applied certain limited procedures to the required supplementary information in accordance with auditing standards generally accepted in the United States of America, which consisted of inquiries of management about the methods of preparing the information and comparing the information for consistency with management's responses to our inquiries, the basic financial statements, and other knowledge we obtained during our audit of the basic financial statements. We do not express an opinion or provide any assurance on the information because the limited procedures do not provide us with sufficient evidence to express an opinion or provide any assurance.

Supplementary Information

Our audit was conducted for the purpose of forming an opinion on the financial statements that collectively comprise the System's basic financial statements. The Schedule of administrative expenses, Schedule of investment expenses and Schedule of consultant and professional services expenses are presented for purposes of additional analysis and are not a required part of the basic financial statements. Such information is the responsibility of management and was derived from and relates directly to the underlying accounting and other records used to prepare the basic financial statements. The information has been subjected to the auditing procedures applied in the audit of the basic financial statements and certain additional procedures, including comparing and reconciling such information directly to the underlying accounting and other records used to prepare the basic financial statements or to the basic financial statements themselves, and other additional procedures in accordance with auditing standards generally accepted in the United States of America. In our opinion, the Schedule of administrative expenses, Schedule of investment expenses and Schedule of consultant and professional services expenses are fairly stated, in all material respects, in relation to the basic financial statements as a whole.

Other Reporting Required by *Government Auditing Standards*

In accordance with *Government Auditing Standards,* we have also issued our report dated October 7, 2026 on our consideration of California State Teachers' Retirement System's internal control over financial reporting and on our tests of its compliance with certain provisions of laws, regulations, contracts, and grant agreements and other matters. The purpose of that report is solely to describe the scope of our testing of internal control over financial reporting and compliance and the results of that testing, and not to provide an opinion on the effectiveness of the System's internal control over financial reporting or on compliance. That report is an integral part of an audit performed in accordance with *Government Auditing Standards* in considering California State Teachers' Retirement System's internal control over financial reporting and compliance.

Management's discussion and analysis (unaudited)

Introduction

Management's discussion and analysis of the California State Teachers' Retirement System's (CalSTRS, the system, we, our) financial performance is intended to fairly and transparently provide an overview of activities for the fiscal year ended June 30, 2026. The discussion and analysis focuses on business events and resulting changes for the fiscal year. This discussion is more meaningful when read in conjunction with CalSTRS' basic financial statements and accompanying notes.

CalSTRS' actual results, performance and achievements expressed or implied in these statements may differ from expectations and are subject to changes in interest rates, securities markets, general economic conditions, legislation, regulations and other factors.

Mission

Founded in 1913, CalSTRS was made up of approximately 15,000 members, held no assets and paid an average annual benefit of $500. As of June 30, 2026, we have grown to serving approximately 1,066,000 members and their beneficiaries, holding approximately $423.3 billion in total net position and paying an average annual Member-Only Benefit of approximately $58,000.

Today, we are the largest educator-only pension fund in the world and continue to deliver on our mission—securing the financial future and sustaining the trust of California's educators.

Year in review

This section provides discussion on significant events and changes impacting CalSTRS for the fiscal year ended June 30, 2026.

Teachers' Retirement Board updates

In February 2026, Governor Newsom reappointed Michael Gunning to serve as one of the public representatives on the Teachers' Retirement Board through December 31, 2029.

The board nominates and elects its chair and vice chair annually to provide board leadership, direction and policy development for the organization. In May 2026, Denise Bradford was reelected as chair, and Sharon Hendricks was elected as vice chair.

In addition, one of the public representative seats on the board remains vacant. Vacant public representative seats are filled by Governor appointment.

Pension Solution Project

The Pension Solution Project was completed, and the new pension administration system went live in September 2025. The system replaces the legacy pension administration platform; adds automated controls and links to financial and content management systems; and offers secure portals for members and employers.

Shared Vision Project

In November 2024, CalSTRS Chief Investment Officer Scott Chan announced the launch of a new strategic initiative: the Shared Vision Project, aimed at strengthening CalSTRS' position as a top global allocator. In today's highly competitive landscape—alongside global pension funds, endowments, foundations and sovereign wealth funds—the ability to adapt and innovate is critical to maintaining a leadership position. Identifying new and improved ways to achieve CalSTRS' goals will require a clear, thoughtful and strategic approach. The Shared Vision Project is integrated into CalSTRS' strategic plans, and is grounded in CalSTRS' mission.

During the March 2026 Investment Committee meeting, staff presented the results of Phase 1 (Listen and Engage to gather insights from key audiences) and Phase 2 (Review and Assess findings from Phase 1 and Divisional Reviews). Five themes emerged capturing CalSTRS' ambition to sustain its position as a top global allocator: mission-driven mindset, world-class talent, smart execution, organizational agility and partner of choice. Phase 3 (Vision and Strategy) of the Shared Vision Project will define, discuss and develop a long-term strategy with the final Shared Vision presented to the board for approval in fall 2026.

Management's discussion and analysis (unaudited)

Financial highlights

This section discusses major changes in account balances for the State Teachers' Retirement Plan (STRP), CalSTRS Pension2® Personal Wealth Plan (Pension2), the Medicare Premium Payment (MPP) Program and the Teachers' Deferred Compensation Fund (TDCF). Comparative financial statement information is presented for the STRP through condensed versions of the statement of fiduciary net position and statement of changes in fiduciary net position as of and for the fiscal years ended June 30, 2026, and June 30, 2025.

State Teachers' Retirement Plan

The STRP is a multiple-employer, cost-sharing defined benefit plan composed of four programs: the Defined Benefit (DB) Program, Defined Benefit Supplement (DBS) Program, Cash Balance Benefit (CBB) Program and Replacement Benefits Program. The STRP holds assets for the exclusive purpose of providing benefits to members of these programs and their beneficiaries.

Other expenses	4,350	7,865	(44.7%)
Total deductions	**21,418,238**	**20,637,048**	**3.8%**
Increase in net position	**49,540,041**	**29,162,513**	**69.9%**
Net position restricted for pensions			
Beginning of the year	370,180,189	341,017,676	8.6%
END OF THE YEAR	**$419,720,230**	**$370,180,189**	**13.4%**

Net position for the STRP increased approximately $49.5 billion, or 13.4%, from $370.2 billion as of June 30, 2025, to $419.7 billion as of June 30, 2026, primarily due to positive investment returns.

The STRP's money-weighted investment return for fiscal year 2025–26 was 14.1%, which resulted in a net investment income of $52.1 billion for the same period. Positive returns in fiscal year 2025–26 were primarily due to gains in the Public Equity and Private Equity portfolios, which had time weighted returns (net of fees) of 25.1% and 7.5%, respectively. Net investment income increased $20.5 billion compared to the prior fiscal year, which had a money-weighted investment return of 9.3% and net investment income of $31.6 billion. Investment assets increased approximately $65.7 billion, or 15.8%, from $415.2 billion as of June 30, 2025, to $480.9 billion as of June 30, 2026, primarily due to the positive investment returns. Refer to the investment management section of management's discussion and analysis for detail of the STRP's investment returns.

Total member, employer and State of California contributions increased $0.7 billion, or 3.8%, primarily due to an increase in the number of active members and amount of creditable compensation as contribution rates for members, employers and the state remained unchanged from the prior fiscal year.

Benefit payments increased $0.7 billion, or 3.5%, due to an increase in the number of STRP's retirees and their beneficiaries and the amount of annual benefit adjustments added to benefit allowances.

Administrative expenses increased $84.8 million, or 33.7%, primarily due to higher depreciation expenses attributable to the headquarters expansion and Pension Solution Project. In addition, consultants and professional services expenses increased, mainly due to the higher maintenance and operation costs required to support multiple systems.

Investment receivables and investments purchased payable increased $5.1 billion and $6.8 billion, respectively, due to the timing of settlement of investment sales and purchases.

Other liabilities increased $0.2 billion primarily due to an increase in amounts owed to counterparties related to fluctuations in performance of derivative instrument contracts as of June 30, 2026.

Securities lending obligation increased 32.3%, or $12.5 billion, driven primarily by strong borrower demand and expanded use of securities lending for Total Fund liquidity management during the current fiscal year. The increase is

consistent with securities lending collateral which increased by $8.2 billion from $38.7 billion as of June 30, 2025, to $46.9 billion as of June 30, 2026.

Other programs and funds

In addition to the STRP, CalSTRS administers two defined contribution plans within the Pension2 Program, a postemployment benefit plan known as the MPP Program, and the TDCF that accounts for ancillary activities associated with deferred compensation plans and programs. The following discussion provides noteworthy changes for each of these programs and funds.

Pension2 403(b) Plan

CalSTRS Pension2 403(b) Plan is a voluntary defined contribution program that offers low-cost and tax-deferred 403(b) and Roth 403(b) plans for additional retirement savings.

Net position for the Pension2 403(b) Plan increased by $0.5 billion from $2.8 billion as of June 30, 2025, to $3.3 billion as of June 30, 2026, primarily due to positive investment returns on program participants' investment assets and an increase in member contributions. Net investment income for the 403(b) Plan was $425.8 million for the fiscal year ended June 30, 2026, compared to net investment income of $263.2 million for the fiscal year ended June 30, 2025. Member contributions for the 403(b) Plan were $360.7 million for the fiscal year ended June 30, 2026, compared to member contributions of $346.9 million for the fiscal year ended June 30, 2025.

Pension2 457(b) Plan

CalSTRS Pension2 457(b) Plan is a voluntary defined contribution program that offers low-cost and tax-deferred 457(b) and Roth 457(b) plans for additional retirement savings.

Net position for the Pension2 457(b) Plan increased by $69.2 million from $216.0 million as of June 30, 2025, to $285.2 million as of June 30, 2026, primarily due to positive investment returns on program participants' investment assets and an increase in member contributions. Member contributions for the 457(b) Plan were $40.8 million for the fiscal year ended June 30, 2026, compared to member contributions of $31.8 million for the fiscal year ended June 30, 2025. Net investment income for the 457(b) Plan was $40.3 million for the fiscal year ended June 30, 2026, compared to net investment income of $22.4 million for the fiscal year ended June 30, 2025.

Medicare Premium Payment Program

CalSTRS administers the MPP Program through the Teachers' Health Benefits Fund. The MPP Program pays Medicare Part A premiums and Medicare Parts A and B late enrollment surcharges for retired members of the DB Program who meet certain eligibility criteria. Members who retire on or after July 1, 2012, are not currently eligible for coverage under the MPP Program.

The MPP Program currently reflects a negative net position resulting from the implementation of GASB Statement No. 68, *Accounting and Financial Reporting for Pensions—an amendment of GASB Statement No. 27*, in fiscal year 2014–15 and GASB Statement No. 75, *Accounting and Financial Reporting for Postemployment Benefits Other Than Pensions*, in fiscal year 2017–18. The implementation of these standards resulted in the program incurring increased administrative expenses from the recognition of its share of the state's net pension liability (NPL) and net OPEB liability. The amounts recognized represent long-term liabilities reported on an accrual basis and do not adversely impact the viability of the fund or its ability to meet current obligations.

Operationally, the MPP Program is funded on a pay-as-you-go basis, with contributions generally being made at the same time and in the same amount as benefit payments and expenses coming due. The net deficit decreased by $0.3 million to approximately $2.2 million as of June 30, 2026, with no significant change in activity compared to fiscal year 2024–25.

Teachers' Deferred Compensation Fund

The TDCF is a trust fund established to account for ancillary activities associated with deferred compensation plans and programs offered by CalSTRS, such as the Pension2 403(b) and 457(b) plans.

Net position for the TDCF increased by $3.7 million from $1.4 million as of June 30, 2025, to $5.1 million as of June 30, 2026, primarily due to an increase in administrative fees earned by the TDCF.

Management's discussion and analysis (unaudited)

Overview of financial statements

Management's discussion and analysis is also an introduction to CalSTRS' basic financial statements. CalSTRS' financial statements include the following components:

- Basic financial statements:
  - Statement of fiduciary net position.
  - Statement of changes in fiduciary net position.
  - Notes to the basic financial statements.
- Required supplementary information (unaudited).
- Other supplementary information.

Statement of fiduciary net position

The statement of fiduciary net position presents information on all of CalSTRS' assets and liabilities, with the difference between the two reported as net position. Over time, the increase or decrease in net position serves as an indicator of CalSTRS' financial condition and our ability to fund future benefit payments.

Statement of changes in fiduciary net position

The statement of changes in fiduciary net position reflects how CalSTRS' net position changed during the fiscal year and presents contributions, investment returns, benefit payments and the costs of plan administration.

Notes to the basic financial statements

The notes to the basic financial statements provide information essential to a full understanding of the basic financial statements. The type of information provided in each note is as follows:

- Note 1 provides a summary of information on the significant provisions of CalSTRS' plans and programs.
- Note 2 provides a summary of significant accounting policies, including the basis of accounting for CalSTRS, management's use of estimates, and cash and investment accounting policies.
- Note 3 provides information regarding the NPL of employers and nonemployer contributing entity for the STRP, including the actuarial assumptions and methods used to determine the total pension liability.
- Note 4 provides information regarding the net OPEB liability of employers for the MPP Program, including the actuarial assumptions and methods used to determine the total OPEB liability.
- Note 5 provides information related to deposits, investments and risks (credit, interest rate and foreign currency) in addition to a schedule of investments that discloses the types of investments within each broad investment category.
- Note 6 provides information related to the fair value measurement of investments.
- Note 7 provides information on the various outstanding debt obligations for CalSTRS.
- Note 8 provides information on the potential contingencies of CalSTRS.
- Note 9 provides a summary of CalSTRS' significant commitments.

Required supplementary information

The required supplementary information section consists of six unaudited schedules intended to assist readers in understanding the NPL of the STRP and the net OPEB liability of the MPP Program. The information available in this section includes:

- Schedule I – Schedule of changes in net pension liability of employers and nonemployer contributing entity.
- Schedule II – Schedule of net pension liability of employers and nonemployer contributing entity.
- Schedule III – Schedule of pension contributions from employers and nonemployer contributing entity.
- Schedule IV – Schedule of money-weighted rate of return for the State Teachers' Retirement Plan and Medicare Premium Payment Program.
- Schedule V – Schedule of changes in net OPEB liability of employers.
- Schedule VI – Schedule of net OPEB liability of employers.

Other supplementary information

Other supplementary information includes details on administrative expenses, investment expenses, and consultant and professional services expenses. The schedules available in this section include:

- Schedule VII – Schedule of administrative expenses.
- Schedule VIII – Schedule of investment expenses.
- Schedule IX – Schedule of consultant and professional services expenses.

Major business components

The sections that follow describe the activities and results of CalSTRS' major business components (investment management and pension administration) for the fiscal year ended June 30, 2026.

Investment management

CalSTRS' primary goal is to maintain a financially sound retirement system. Our investment philosophy is "long-term patient capital"—investing for long-term net cash flows and capital gain potential at a reasonable price. The chief investment officer has authority to oversee and manage the investments and assets of the system in compliance with policy guidelines adopted by the board or its Investment Committee.

Investment beliefs

CalSTRS' investment beliefs provide a foundational framework for all of CalSTRS' investment decision-makers to invest in a manner that reflects CalSTRS' unique view of the global investment markets and its vision for participating in these markets to accomplish its fiduciary goal. In this respect, these investment beliefs should help guide CalSTRS' policy leaders and other decision-makers to develop appropriate policies, procedures and investment plans for CalSTRS' assets. The nine investment beliefs are:

1. Diversification strengthens the fund.
2. The global public investment markets are largely, but not completely, efficient.
3. Managing investment costs yields long-term benefits.
4. Internal management is a critical capability.
5. CalSTRS can potentially capture an illiquidity risk premium.
6. Managing short-term drawdown risk can positively impact CalSTRS' ability to meet its long-term financial obligations.
7. Responsible corporate governance, including the management of environmental, social and governance factors, can benefit long-term investors like CalSTRS.
8. Alignment of financial interests between CalSTRS and its advisors is critical.
9. Investment risks associated with climate change and the related economic transition—physical, policy and technology driven—materially impact the value of CalSTRS' investment portfolio.

Time-weighted returns

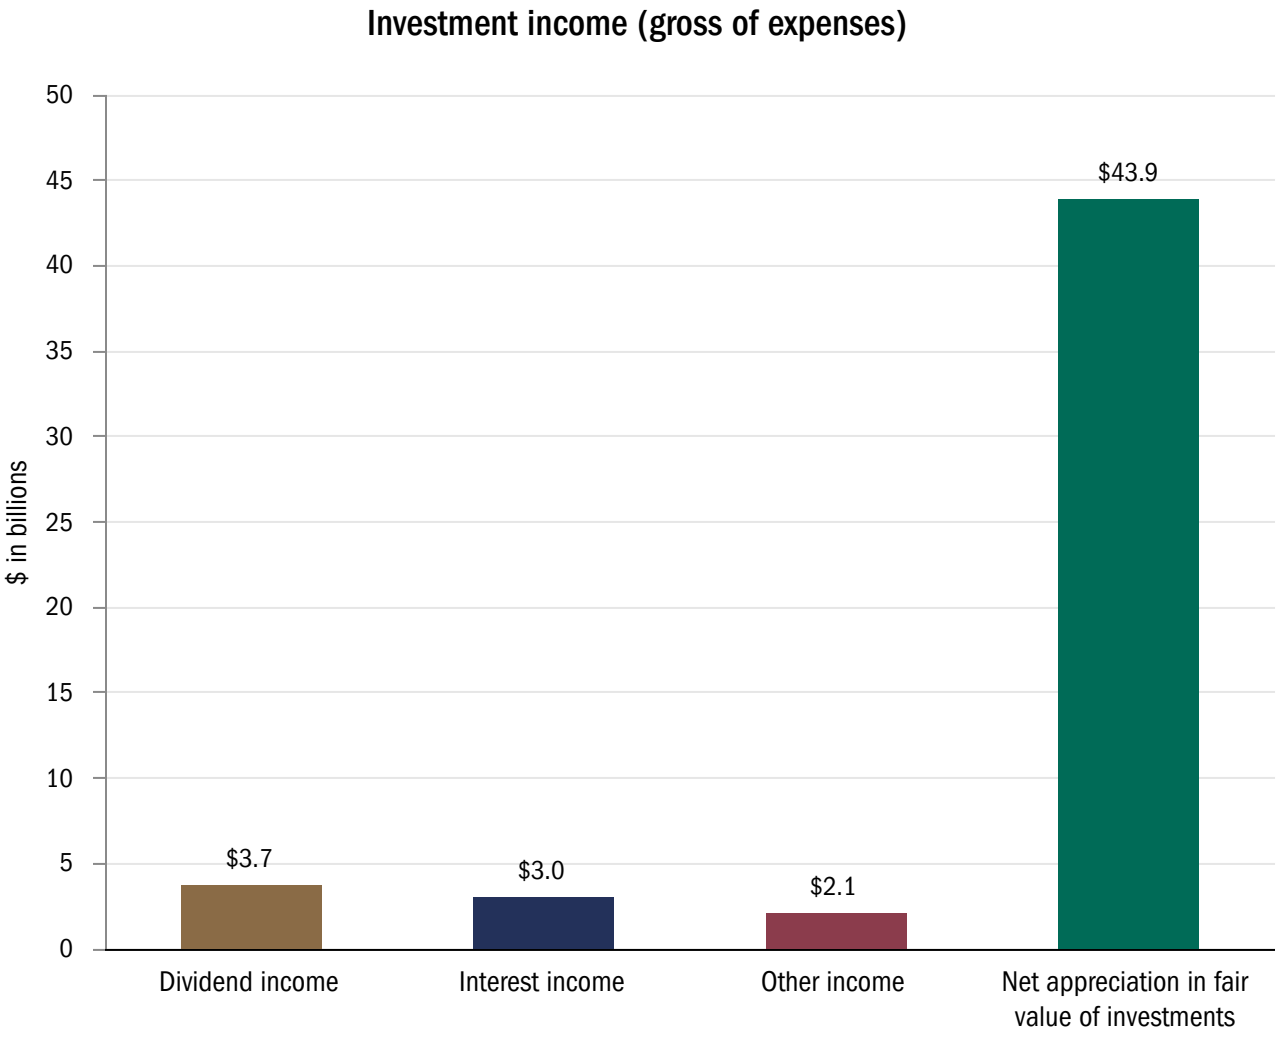

CalSTRS uses a time-weighted return to evaluate returns for portfolio performance purposes. CalSTRS also prepares and discloses a money-weighted return for financial reporting purposes in accordance with GASB Statement No. 67, *Financial Reporting for Pension Plans—an amendment of GASB Statement No. 25*, and GASB Statement No. 74, *Financial Reporting for Postemployment Benefit Plans Other Than Pension Plans*. The money-weighted rate of return for the STRP was 14.1% for the fiscal year ended June 30, 2026. Additional detail and discussion of money-weighted returns is included in Note 5 of the notes to the basic financial statements.

For the fiscal year ended June 30, 2026, our time-weighted return calculated on a net-of-fees basis was 13.9%. CalSTRS is a long-term investor with a goal of achieving an average return of 7.0% over a multiyear horizon to meet pension obligations. Our returns (net of fees) reflect the following long-term performance:

- 10.2% over 3 years
- 7.0% over 5 years
- 9.4% over 10 years
- 7.5% over 20 years
- 7.8% over 30 years

Sources of investment income

The graph below displays a detailed view of the sources of investment income for the STRP (excluding securities lending income), based on the statement of changes in fiduciary net position as of June 30, 2026.

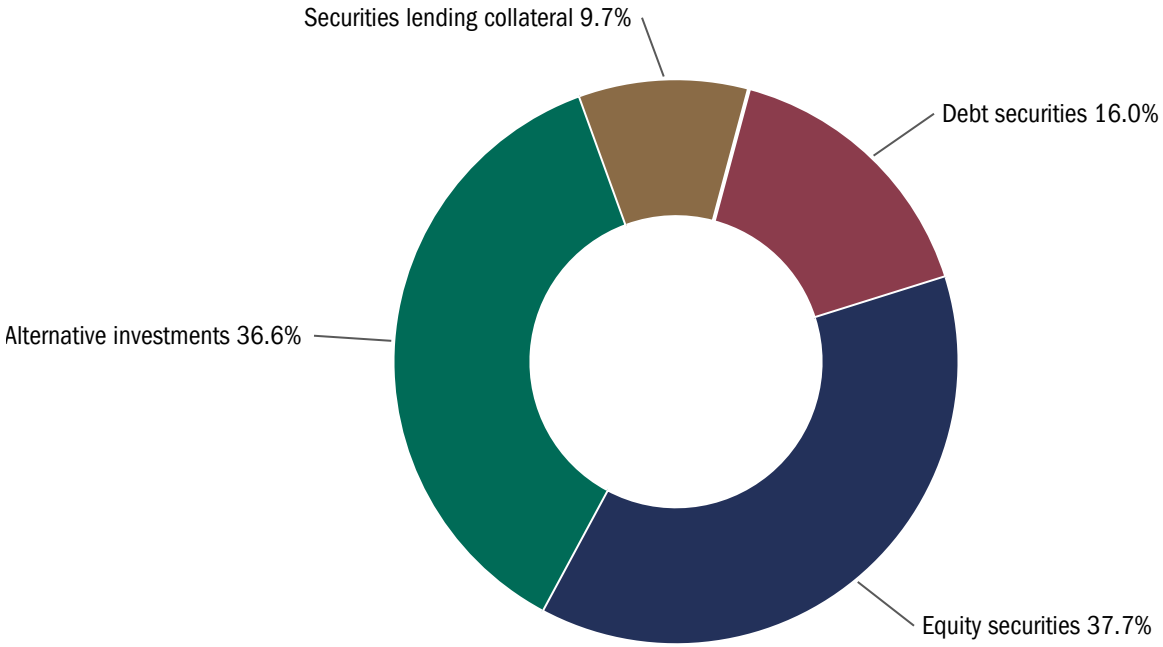

CalSTRS' investments earn income in the form of interest and dividends from holding fixed income securities and various types of equity interests in public companies and limited partnerships.

Other income consists primarily of distributed income from alternative investments (such as rent), term loans and securities litigation. Net appreciation consists of realized gains (losses) and unrealized appreciation (depreciation). Realized gains and losses are generally a result of investment sales, write-offs and reorganizations. Unrealized appreciation and depreciation are generated by period-over-period valuation fluctuations in all types of investments.

Asset allocation and performance

The chart below presents net STRP investments based on their classification on the statement of fiduciary net position as of June 30, 2026. This chart only represents net investment assets of the STRP as these assets are managed by CalSTRS. While CalSTRS offers investment strategies for the Pension2 Program, investment assets of the 403(b) and 457(b) plans are not actively managed by CalSTRS. Additionally, investment assets in the MPP Program and the TDCF are invested in the Surplus Money Investment Fund, which is a pooled investment program administered by the California State Treasurer.

Allocation of investments based on the statement of fiduciary net position[1,2]

1 Net derivative instruments and bond proceeds investment each represent 0.01% or less of total net investments for the STRP and are not presented in the above chart.

2 Recalculation of investments based on figures presented within the statement of fiduciary net position may differ due to rounding.

The following table displays the distribution of investments in the STRP (excluding bond proceeds investment and securities lending collateral and obligations) based on the portfolio allocation compared to the classification within the statement of fiduciary net position as of June 30, 2026.

Portfolio allocation versus financial statement classification

Portfolio allocation		Financial statement classification	
Asset class/Strategy	**Asset allocation**	**Investments**	**% of asset class/Strategy**
Public Equity[1]	43.4%	Equity securities	98.2%
		Debt securities	1.2%

		Derivative instruments	9.1%
		Debt securities	(253.6%)
		Other[2]	(228.0%)
TOTAL FUND	**100.0%**		

1 Includes Sustainable Investment and Stewardship Strategies investments totaling $3.9 billion.

2 Consists of cash, payables, receivables, and obligations under reverse repurchase agreements that are reflected as such on the statement of fiduciary net position.

Equity securities

As of June 30, 2026, the STRP held $181.0 billion in equity securities across all portfolios. Equity securities are primarily composed of publicly traded domestic and international securities within the Public Equity Portfolio. The Public Equity Portfolio consists of two main strategies, Global Equity Core and the Low-Carbon Target Portfolio.

During the fiscal year 2025–26, the Public Equity Portfolio returned 25.1%, significantly outperforming its policy benchmark and reflecting broad gains in global stock markets. This strong performance was supported by resilient economic growth, signs of moderating inflation, and a shift toward a more accommodative monetary policy stance as the Federal Reserve began lowering interest rates in late 2025 after a prolonged period of increases. These factors bolstered investor confidence in equities.

Equity markets did experience brief volatility in early 2026 when a surge in oil prices and geopolitical tensions raised inflation concerns and bond yields. However, equities quickly rebounded, even as underlying macroeconomic pressures persisted. International developed markets also delivered solid results on the back of modest economic improvements, although returns varied by region. Over the

longer 3-, 5-, 10-, and 20-year periods, the Public Equity Portfolio has consistently met or exceeded its benchmark.

Debt securities

As of June 30, 2026, the STRP held $76.7 billion in debt securities across all portfolios. Debt securities are mainly composed of investments in the Fixed Income Portfolio, which holds primarily debt securities comprised of U.S. and non-U.S. dollar-based investment grade and non-investment grade securities. The Real Estate, Risk Mitigating Strategies (RMS), Inflation Sensitive and Collaborative Strategies portfolios also may include investments in debt securities.

Fixed income markets navigated a shifting interest-rate environment in fiscal year 2025–26. In the first half of the year, the Federal Reserve delivered rate cuts, lowering the federal funds rate from its prior peak as inflation moderated and labor market conditions softened. While short-term policy rates declined, long-term interest rates remained relatively stable, which provided a generally supportive backdrop for fixed income markets.

In the second half of the fiscal year, yields declined early amid moderating near-term inflation and increased growth uncertainty, but ended the year higher as rising energy prices, resilient economic activity, and heightened geopolitical risks pushed yields upward. For the full year, the STRP's Fixed Income Portfolio returned 4.4%, reflecting a modest gain as income and spread compression offset the impact of rising yields. This result was roughly in line with the portfolio's benchmark, as active management helped cushion the mid-year volatility. Over the 3-, 5-, 10-, and 20-year periods, the Fixed Income Portfolio's returns have been consistently in line with or slightly above its benchmark.

Alternative investments

Alternative investments include investments in Private Equity, Fixed Income, Real Estate, Inflation Sensitive, Sustainable Investment and Stewardship Strategies (SISS) Private Portfolio, Collaborative Strategies and RMS. As of June 30, 2026, the STRP held $175.7 billion in alternative investments.

The Private Equity asset class is comprised primarily of limited partnership and co-investment structures invested in equity-based and debt-based opportunities. Types of investment strategies include leveraged buyouts, venture capital, expansion capital, distressed debt and mezzanine investments.

The Fixed Income private portfolio is comprised of private credit allocations focused primarily on corporate lending. These investments include senior secured loans, unitranche loans, subordinated debt and other structured credit opportunities. Investments are made through private placements, limited partnerships, co-investment structures, and non-traded business development companies.

The Real Estate asset class is comprised of equity and debt-based investments in directly held real estate, such as wholly owned properties, joint venture investments and non-directly held real estate, which consist primarily of commingled funds and co-investments. The Real Estate asset class is focused on investing in direct, discretionary investments to provide CalSTRS with control and better alignment of interests with partners.

The Inflation Sensitive Portfolio invests in strategies that include infrastructure, commodities, U.S. Treasury inflation protected securities, timberland and agriculture. Alternative investments in this asset class primarily consist of limited partnership structures invested in equity-based and debt-based opportunities.

The SISS Portfolio invests in sustainable and climate-focused opportunities that have a demonstrable positive contribution to a more sustainable global economy. The portfolio invests opportunistically across private equity, private credit, and infrastructure, using a range of investment structures such as funds, co-investments, direct investments, and joint-ventures.

The Collaborative Strategies Portfolio serves as an incubator for new investment ideas to improve diversification of the total fund. The objective of the portfolio is to add flexibility for the investment team to pursue new and/or compelling strategies and investments that may be beyond the specific frameworks or expertise of existing asset classes. Investments in this asset class primarily consist of limited partnership structures invested in equity-based and debt-based opportunities.

The RMS Portfolio invests in strategies that further diversify CalSTRS' overall investment portfolio, primarily our significant equity exposure. These strategies include diversifiers and defenders. The strategies within the RMS Portfolio are expected to have low correlations to equity markets and generate positive returns at different times during the business cycle.

Alternative investments contributed positively to total fund performance in fiscal year 2025–26, driven by stable economic growth and selective opportunities across private markets, despite valuation headwinds from higher interest rates.

Private Equity generated a 7.5% net return, matching its custom benchmark. Although higher interest rates and slower deal activity moderated industry-wide returns relative to public equities, CalSTRS' focus on co-investments and partnerships with established managers contributed to

performance. Over the 3-, 5-, 10-, and 20-year periods, the Private Equity portfolio has consistently exceeded its benchmark, demonstrating sustained long-term value creation.

Other alternative asset classes produced mixed but generally positive outcomes. Real Estate returns were nearly flat (0.2%) and below benchmark, as elevated interest rates and tighter credit conditions pressured property valuations, particularly in the office sector, while industrial and multifamily assets proved more resilient. Risk Mitigating Strategies and Inflation Sensitive portfolios delivered strong returns, benefiting from strategies that performed well during periods of market volatility and inflation. Overall, alternative investments continue to provide diversification and long-term return support for the fund.

Annual Cost and Collaborative Model Savings Report

The *Annual Cost and Collaborative Model Savings Report* for the 2024 calendar year was presented to the board in November 2025. This report provides a breakdown of the costs associated with managing the STRP Investment Portfolio for the calendar year 2024. It includes cost trend data over a 10-year period for each asset class and investment strategy, a peer comparison of investment cost data, and a capture ratio analysis to show cost effectiveness of the total fund, asset classes and strategies over time.

For the 2024 calendar year, overall costs (including carried interest) decreased by 3%, and the Collaborative Model saved the plan $550 million. The decline in total costs was driven by lower carried interest paid out by private investments during the year.

Total Portfolio Costs, which consist of management fees, internal operating expenses and partnership costs (other expenses) and exclude carried interest, increased 1% from the prior year. These costs are impacted the most by changes in the portfolio's net asset value (NAV), the allocation to private assets, and the split between internal and external management.

The total portfolio NAV increased by 9% over the year. Although this would typically lead to an increase in management fees and Total Portfolio Costs overall, it was offset by an increase in internally managed public portfolios that do not incur management fees. Additionally, the strategic asset allocation was adjusted, reducing Public Equity by 1% and allocating it to Private Credit. Any potential increase to fees resulting from a shift toward more private assets was offset by an increase in co-investments and similar collaborative investment types.

Asset allocation targets

CalSTRS conducts an Asset Liability Management (ALM) study every four years to direct how the Investments staff allocates assets among different opportunities. This study weighs the system's pension liabilities versus assets needed to fund these pensions over the long term and is a critical process that drives the performance of the investment portfolio. The ALM study and the review of the fund's actuarial experience study and valuations are aligned, which helps ensure the ALM is using the latest financial and demographic assumptions and applying those to both our assets and liabilities.

The most recent ALM study was conducted in 2023 and approved by the board's Investment Committee in May 2023. CalSTRS staff will make gradual shifts in allocations through a series of steps to move toward these long-term targets. The transition between each step is dependent upon market opportunities and will require approval by the Investment Committee.

The table below shows the planned allocation steps on the way to reaching our long-term target:

	Effective date				
Asset class/ Strategy	7/1/23 **Step 1**	7/1/24 **Step 2**	7/1/25 **Step 3**	TBD **Step 4**	**Long-term target**
Public Equity	41.0%	40.0%	39.0%	38.0%	38.0%
Real Estate	15.0%	15.0%	15.0%	15.0%	15.0%
Private Equity	14.0%	14.0%	14.0%	14.0%	14.0%
Fixed Income	12.0%	13.0%	13.0%	14.0%	14.0%
Risk Mitigating Strategies	10.0%	10.0%	10.0%	10.0%	10.0%
Inflation Sensitive	6.0%	6.0%	7.0%	7.0%	7.0%
Cash/Liquidity	2.0%	2.0%	2.0%	2.0%	2.0%

TOTAL ASSET ALLOCATION	**100.0%**	**100.0%**	**100.0%**	**100.0%**	**100.0%**

Pension administration

As a provider of pension and other postemployment benefits, CalSTRS must ensure that the contributions we receive and investment income we earn will fund current and future benefits owed to our members and their beneficiaries. Actuarial valuation reports are prepared on an annual basis to help assess the funded status of our programs and are integral to our administration of benefits. As a result of requirements set forth by GASB standards, CalSTRS engages with our consulting actuary (Milliman) to produce two types of actuarial valuation reports for both the STRP and MPP Program: one for financial reporting purposes and one for funding purposes.

Pension system actuarial valuation reports

The financial reporting actuarial valuation is performed to determine the NPL and other required financial disclosures in accordance with GASB standards. The NPL is calculated for the STRP as a whole and reflects benefits earned by plan members as of a certain date net of pension plan assets. The total pension liability for the STRP was determined by applying update procedures to the financial reporting actuarial valuation as of June 30, 2025, and rolling forward the total pension liability to June 30, 2026. CalSTRS does not project a depletion of assets with the provision of additional member, employer and state contributions resulting from the enactment of the CalSTRS Funding Plan. CalSTRS discounted all future obligations for the STRP using the long-term assumed rate of return on plan assets gross of administrative costs (currently 7.10%). Based on that assumption, the STRP had an NPL of $32.5 billion as of June 30, 2026.

The funding actuarial valuation assesses the sufficiency of existing assets and future contributions to fund promised benefits and guides decisions regarding the long-term viability of the programs. Separate funding actuarial valuations are performed for the DB Program, DBS Program and CBB Program.

An actuarial projection is also performed for the Supplemental Benefit Maintenance Account (SBMA), which is a special account in the STRP that provides inflation protection (after revenue received from the School Land Bank Fund administered by the State Lands Commission is exhausted) to CalSTRS members whose current purchasing power has fallen below 85% of the purchasing power of their initial benefit. The June 30, 2025, projection of SBMA funding sufficiency report, which is completed every two years, showed that current SBMA assets plus expected future contributions are projected to be sufficient to pay all expected purchasing power benefits through June 30, 2089.

There are two differences between the assumptions used in the financial reporting actuarial valuation and those used in the funding actuarial valuation. The first difference is the long-term rate of return, which is gross of administrative costs (7.10%) for financial reporting purposes and net of administrative costs (7.00%) for funding purposes. Investment return assumptions are developed by CalSTRS' investment and actuarial consultants and are adopted by the board. The second difference is that, for financial reporting purposes, future annual increases of 2.75% in the lump-sum death benefit are assumed to be substantively automatic and are included in the calculation of the total pension liability. No future increases in the lump-sum death benefit are assumed for funding purposes.

The most recent funding actuarial valuation indicates that the DB Program had 79.3% of the funds needed to pay the actuarial cost of the benefits accrued as of June 30, 2025, which increased by 2.6% from the June 30, 2024, valuation. This increase is primarily attributable to the required contributions made by employers and the state in fiscal year 2024–25.

Additionally, the funding actuarial valuation for the DBS Program indicates that as of June 30, 2025, the DBS Program had a funded ratio of 124.8% compared to the June 30, 2024, funded ratio of 123.9%. The funding actuarial valuation of the CBB Program indicates that as of June 30, 2025, the CBB Program had a funded ratio of 116.0% compared to the June 30, 2024, funded ratio of 114.2%.

In May 2026, the board granted additional earnings credits (AECs) for the DBS and CBB programs totaling $614.0 million and $13.1 million, respectively. Refer to Note 1 of the notes to the basic financial statements for additional information.

Other postemployment benefits actuarial valuation reports

The financial reporting actuarial valuation is performed to determine the net OPEB liability (NOL) of the MPP Program and other required financial disclosures in accordance with GASB standards. The NOL reflects the present value of projected benefits to program participants as of a certain date, net of plan assets. The total OPEB liability for the MPP Program was determined by applying update procedures to the financial reporting actuarial valuation as of June 30, 2025, and rolling forward the total OPEB liability to June 30, 2026. As of June 30, 2026, the NOL for the MPP Program was $207.1 million.

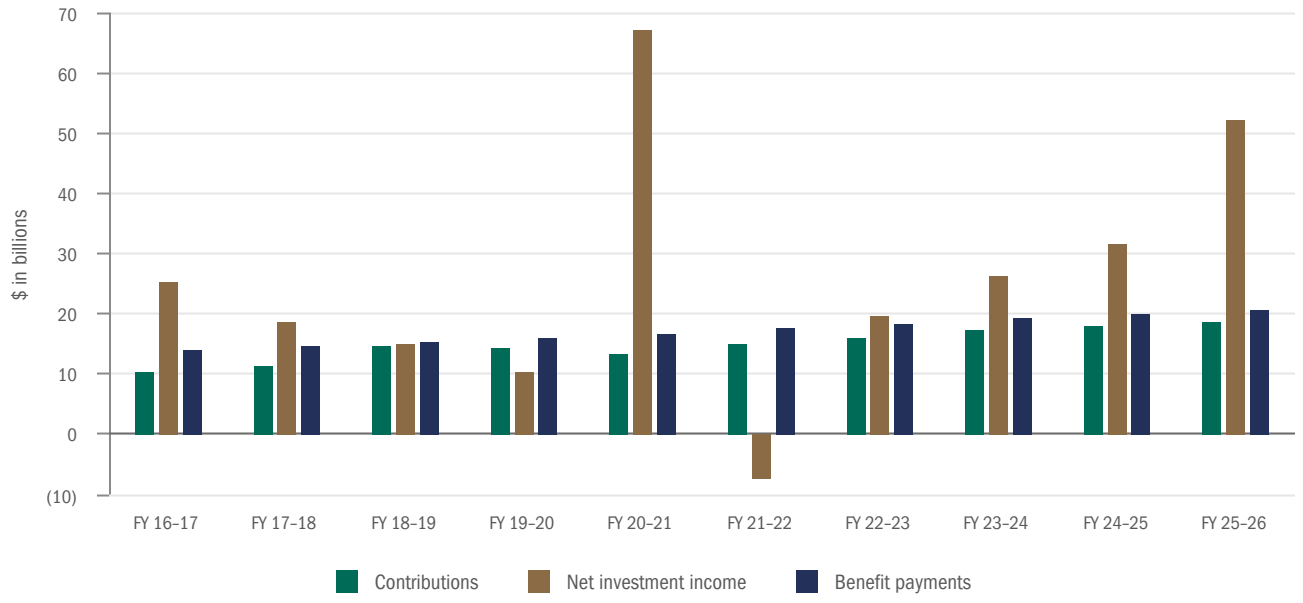

For financial reporting purposes, the plan is essentially unfunded as the fiduciary net position of the plan will not be sufficient to make the projected future benefit payments. Therefore, in accordance with GASB Statement No. 74, in instances such as this, the rate used to discount the total OPEB liability represents the yield or index rate for 20-year, tax-exempt general obligation municipal bonds with an average rating of AA/Aa or higher. The discount rate as of June 30, 2026, for the MPP Program OPEB liability was 4.67% as measured by the Bond Buyer's 20-Bond GO Index as of June 30, 2026.

The MPP Program is funded on a pay-as-you-go basis by contributions that are redirected from the DB Program. As such, the funding actuarial valuation measures the sufficiency of DB Program employer contributions that will be available to fund the MPP Program benefits in future periods. This differs from the financial reporting actuarial valuation, which focuses on the obligation an employer incurs on behalf of employees through the employment-exchange process.

The MPP Program funding actuarial valuation as of June 30, 2025, found that the MPP Program assets, along with MPP Program allocated funding from future DB Program employer contributions, are sufficient to finance the future MPP Program obligations of $184.9 million for both Part A premiums and Part A and Part B surcharges.

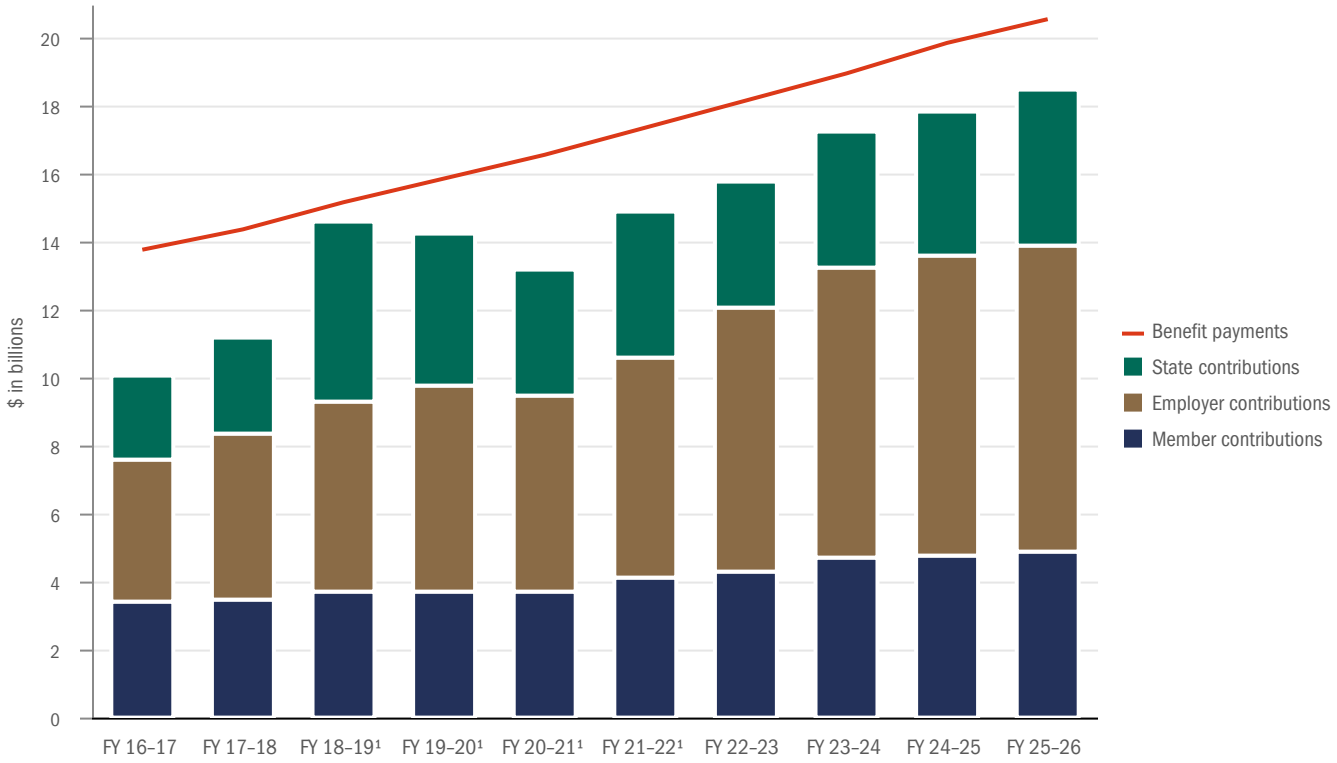

STRP investment income, benefit payments and contributions

The following chart is a 10-year comparison of contributions, net investment income and benefit payments.

Note: Each data set shown by fiscal year in the chart above is presented in the order of contributions on the left, net investment income in the middle and benefit payments on the right.

The following chart compares STRP contributions to benefit payments for the last decade.

Note: Each data set shown by fiscal year in the chart above is presented in the order of state contributions on top, employer contributions in the middle and member contributions on the bottom.

[1] CalSTRS recognized one-time, supplemental contribution payments from the state of approximately $583.7 million, $297.0 million, $1.1 billion and $2.2 billion in fiscal years 2021–22, 2020–21, 2019–20 and 2018–19, respectively.

As seen in the charts above, annual contributions generally fall short of annual benefit payments; however, it is normal for a mature pension plan to have benefit payments exceed contributions coming into the system. Additionally, investment income and the associated cash generated on our investments have historically been sufficient to cover the gap between contributions and benefit payments. Over the last 30 years, investment returns have funded approximately 62.7% of retirement benefits with the remainder coming from a combination of member, employer and state contributions.

The gap between contributions and benefit payments began to decrease as a result of increased employer and state contribution rates pursuant to the CalSTRS Funding Plan beginning in fiscal year 2014–15. The gap was significantly reduced when the state made supplemental contribution payments of approximately $2.2 billion and $1.1 billion in fiscal years 2018–19 and 2019–20, respectively. However, those supplemental payments were one-time, nonrecurring contributions. Going forward, the gap between contributions and benefit payments is expected to increase in perpetuity in line with a maturing pension plan.

As a pension plan matures, having negative cash flows is expected and does not necessarily imply the system will have to sell assets to make benefit payments. Through the end of the CalSTRS Funding Plan, cash generated from investment income (such as dividends, coupons on bonds and rental income on real estate holdings) would need to be at least 2.5% of total assets to avoid having to sell assets to pay benefits. According to CalSTRS' 2025 *Review of Funding Levels and Risks Report,* available at CalSTRS.com, enough cash is currently generated from investment income to cover this gap and has averaged 2.5% over the last 28 years.

Closing remarks

Net position for all CalSTRS administered funds as of June 30, 2026, was $423.3 billion, which is an increase of approximately $50.1 billion, or 13.4%, from the previous fiscal year. This increase was primarily driven by positive investment returns and keeps CalSTRS on track to achieve full funding by 2046. The funded status of our DB Program continues to increase and was 79.3% as of the most recent funding actuarial valuation report. CalSTRS remains a broadly diversified, long-term investor, which helps manage periods of market volatility and uncertainty. Our overall diversification minimizes the risk of loss and maximizes the rate of return.

Our investment and enterprise risk management programs and strategic and funding plans all position CalSTRS to remain in a sound financial position to meet our obligations to our members and their beneficiaries. We remain committed to securing the financial future and sustaining the trust of California's educators.

The accompanying notes are an integral part of these statements.

1. Significant provisions of CalSTRS plans and programs

The California State Teachers' Retirement System (CalSTRS, the system, we, our) administers a hybrid retirement system consisting of a defined benefit plan, two defined contribution plans, a postemployment benefit plan and a fund used to account for ancillary activities associated with the deferred compensation plans and programs:

- State Teachers' Retirement Plan (STRP)
- CalSTRS Pension2 403(b) Plan
- CalSTRS Pension2 457(b) Plan
- Medicare Premium Payment (MPP) Program
- Teachers' Deferred Compensation Fund (TDCF)

CalSTRS provides pension benefits, including disability and survivor benefits, to full-time and part-time California public school teachers from prekindergarten through community college and certain other employees of the public school system and other state agencies. The Teachers' Retirement Law (California Education Code section 22000 et seq.), as enacted and amended by the California Legislature and the Governor, established these plans and CalSTRS as the administrator. The terms of the plans may be amended through legislation.

CalSTRS is a component unit of the State of California (the state). These financial statements include only the accounts of CalSTRS. The state includes CalSTRS' various plans and programs as fiduciary funds in its financial statements.

Under California Constitution, Article 16, Section 17, the Teachers' Retirement Board (the board) has plenary authority and fiduciary responsibility for investment of moneys and administration of the system. The board is composed of 12 members:

- Five members appointed by the Governor and confirmed by the Senate for a term of four years: one school board representative, one retired CalSTRS member and three public representatives.
- Four ex officio members who serve for the duration of their term in office: the California Director of Finance (who is appointed by the Governor and confirmed by the Senate), the California State Controller, the California State Treasurer and the State Superintendent of Public Instruction.
- Three member-elected positions representing current educators who serve for a term of four years.

Section 22209 of the California Education Code gives the board authority to appoint a chief executive officer (CEO), while Section 20520 of the California Code of Regulations gives the board authority to delegate any acts within its power to the CEO. Pursuant to Section 22301 of the California Education Code, the CEO may delegate any act or duty to subordinates unless required by the board to act personally.

State Teachers' Retirement Plan

The STRP is a multiple-employer, cost-sharing defined benefit plan composed of four programs: Defined Benefit (DB) Program, Defined Benefit Supplement (DBS) Program, Cash Balance Benefit (CBB) Program and Replacement Benefits (RB) Program. A Supplemental Benefit Maintenance Account (SBMA) exists within the STRP and provides purchasing power protection for DB Program benefits. The STRP holds assets for the exclusive purpose of providing benefits to members of these programs and their beneficiaries. CalSTRS also uses plan assets to defray reasonable expenses of administering the STRP. Although CalSTRS is the administrator of the STRP, the state is the sponsor and obligor of the trust. In addition, the state is both an employer and nonemployer contributing entity to the STRP.

STRP Defined Benefit Program

As of June 30, 2026, there were approximately 1,800 employers (school districts, community college districts, county offices of education, charter schools, state agencies and regional occupational programs) reporting payroll data through 73 reporting entities to the DB Program.

Membership is mandatory for all employees meeting certain statutory requirements and optional for all other employees performing creditable service activities. The DB Program provides retirement benefits based on members' final compensation, age and years of service credit. In addition, the program provides benefits to members upon disability and to their survivors or beneficiaries upon the death of eligible members.

The following table presents rounded membership numbers for the DB Program as of June 30, 2026:

Active members	
Vested	329,000
Nonvested	142,000
Total active members	**471,000**
Inactive members	
Vested	53,000
Nonvested	199,000
Total inactive members	**252,000**
Retirees and beneficiaries	**343,000**
TOTAL MEMBERS, RETIREES AND BENEFICIARIES	**1,066,000**

The DB Program has two benefit structures:

- CalSTRS 2% at 60: Members first hired on or before December 31, 2012, to perform service that could be creditable to CalSTRS.
- CalSTRS 2% at 62: Members first hired on or after January 1, 2013, to perform service that could be creditable to CalSTRS.

There are several differences between the two benefit structures, which are noted below.

CalSTRS 2% at 60

- CalSTRS 2% at 60 members are eligible for normal retirement at age 60, with a minimum of five years of credited service. The normal retirement benefit is equal to a factor of 2.0% of final compensation multiplied by the number of years of credited service. Early retirement options are available at age 55 with five years of credited service or as early as age 50 with 30 years of credited service. The age factor for retirements after age 60 increases with each quarter year of age to a maximum of 2.4% at age 63 or older. Members who have 30 years or more of credited service receive an additional increase of 0.2% to the age factor, up to the 2.4% maximum.
- CalSTRS calculates retirement benefits based on one-year final compensation for members with 25 or more years of credited service, or for classroom teachers with fewer than 25 years of credited service if the employer entered into, extended, renewed or amended an agreement prior to January 1, 2014, to elect to pay the additional benefit cost for all of its classroom teachers. One-year final compensation is a member's highest average annual compensation earnable for 12 consecutive months based on the creditable compensation that the member could earn in a school year while employed on a full-time basis. For most members with fewer than 25 years of credited service, final compensation is the highest average annual compensation earnable for any 36 consecutive months based on the creditable compensation that the member could earn in a school year while employed on a full-time basis.
- For fiscal year 2025–26, the limit on compensation that can be counted toward a member's benefit is $350,000, if hired on or after July 1, 1996, pursuant to Internal Revenue Code (IRC) section 401(a)(17). No contributions are paid by the member, employer or the state on compensation in excess of the limit, and any compensation beyond the limit is excluded from determining final compensation.
- Final compensation is based on salary and certain other types of remuneration. Other types of compensation, such as allowances, cash in lieu of fringe benefits and compensation for unused accumulated leave are not creditable compensation and do not count toward any CalSTRS benefit program. Contributions on compensation paid a limited number of times and compensation determined to have been paid to enhance a benefit are creditable to the DBS Program.
- Members who accumulated at least 30 years of credited service by December 31, 2010, receive a longevity bonus of $200, $300 or $400 per month for 30, 31 or 32 or more years of credited service, respectively.
- Specified members retired under the DB Program, their option beneficiaries and surviving spouses receiving a benefit as of January 1, 2000, are guaranteed a minimum benefit based on the member's years of service credit. The total annual amount payable to the member with 20 years of service credit generally will not be less than $15,000, increasing incrementally to $20,000 with 30 or more years of service credit.

CalSTRS 2% at 62

- CalSTRS 2% at 62 members are eligible for normal retirement at age 62, with a minimum of five years of credited service. The normal retirement benefit is equal to 2.0% of final compensation multiplied by the number of years of credited service. An early retirement option is available at age 55. The age factor for retirement after age 62 increases with each quarter year of age to 2.4% at age 65 or older.
- All CalSTRS 2% at 62 members have their final compensation based on their highest average annual compensation earnable for 36 consecutive months based on the creditable compensation that the member could earn in a school year while employed on a full-time basis.
- The limit on compensation that can be counted toward a member's benefit is adjusted each fiscal year based on changes in the Consumer Price Index for All Urban Consumers: U.S. City Average. In fiscal year 2025–26, the limit was $187,369.
- Compensation paid in cash by an employer, pursuant to a publicly available written contractual agreement, for each pay period in which creditable service is performed is creditable to CalSTRS benefit programs for CalSTRS 2% at 62 members. Other compensation, such as allowances, cash in lieu of fringe benefits, compensation paid a limited number of times and compensation determined to have been paid to enhance a benefit, is not creditable to any CalSTRS benefit program.

The following provisions apply to both CalSTRS 2% at 60 and CalSTRS 2% at 62 members:

- After earning five years of credited service, members become vested to receive service retirement benefits.
- After five years of credited service, a member (younger than age 60 if under disability Coverage A or no age limit if under disability Coverage B) is eligible for disability benefits of 50% of final compensation plus 10% of final compensation for each eligible child, up to a maximum addition of 40%. Final compensation for these disability benefits is based on the creditable compensation that the member actually earned. The member must have a disability that can be expected to last continuously for at least 12 months to qualify for a benefit.
- Contributions on compensation for service in excess of one year due to overtime or working additional assignments are credited to the DBS Program.
- A family benefit is available if an active member dies and has at least one year of credited service.
- Members' accumulated contributions are refundable with interest upon separation from CalSTRS. The board determines the credited interest rate for each fiscal year. For the fiscal year ended June 30, 2026, the rate of interest credited to members' accounts was 4.36%.
- There is a postretirement annual benefit increase of 2% of the initial monthly benefit on a simple (rather than compound) basis. This benefit is vested for members who retired in 2014 or pay the higher contribution rates resulting from the CalSTRS Funding Plan, which was enacted in June 2014 with the passage of California Assembly Bill 1469.
- The member's benefit is reduced dollar for dollar, regardless of age, for the first 180 calendar days after retirement if the member performs activities in the public schools that could be creditable to CalSTRS, unless the Superintendent, the county superintendent of schools, or the chief executive officer of a community college takes certain actions specified in California Education Code section 24214.5 with respect to a member who is above normal retirement age.
- There is an annual limitation on earnings from activities that could be creditable to CalSTRS for retired members. The member's benefit is reduced dollar for dollar by the amount of any earnings in excess of $80,245 in fiscal year 2025–26.
- Any benefit enhancements to the DB Program made on or after January 1, 2013, apply only to service performed on or after the effective date of the enhancement.
- A CalSTRS member who is convicted of committing a felony in the course of their official duties, including specifically, a felony involving a child with whom the member had contact as part of the member's official duties, forfeits their right to any benefits accrued commencing with the commission of the felony.

Purchasing power protection

Purchasing power protection payments are provided to retired and disabled members of the DB Program and their beneficiaries through annual distributions (in quarterly payments) to restore purchasing power up to 85% of the initial monthly benefit. These payments are funded by revenue generated from school lands with the remaining balance covered by the SBMA.

School lands revenue is generated from land granted to California by the federal government to support schools and lieu lands, which are properties purchased with the proceeds from the sale of school lands. California Public Resources Code section 6217.5 allocates school lands revenue to the system for purchasing power protection. The SBMA is funded through a continuous appropriation from the state's General Fund in an amount equal to 2.5% of the total creditable compensation of the fiscal year ended in the immediately preceding calendar year, reduced by $72.0 million, pursuant to California Education Code section 22954.

Purchasing power protection payments are established as vested benefits to the extent that funds are available pursuant to a contractually enforceable promise of the state to make the contributions from the General Fund at the current levels.

For the fiscal year ended June 30, 2026, the amount of school lands revenues credited toward purchasing power protection was $7.6 million, while the amount contributed to the SBMA from the General Fund was $1.0 billion. In the fiscal year ended June 30, 2026, 184,366 members received supplemental benefit payments.

Benefit enhancements

A school employer may provide, at the employer's cost, an additional two years of service credit to increase the amount of the member's monthly retirement benefit. This may be paid for by the employer in installments not to exceed eight years. If the employer chooses to pay in installments, the employer is charged interest on the unpaid balance at the actuarially assumed rate of return on investments for the DB Program (currently 7.00%). As of June 30, 2026, the outstanding balance of receivables for benefit enhancements was $10.3 million.

Contributions

The parameters for member, employer and state contribution rates are set by the California Legislature and the Governor and detailed in the Teachers' Retirement Law. Current contribution rates were established by California Assembly Bill 1469 (CalSTRS Funding Plan), which was passed into law in June 2014 and established a schedule of contribution rate increases shared among members, employers and the state to bring CalSTRS toward full funding by 2046.

Members

The member contribution rate for CalSTRS 2% at 60 members is set in statute at 10.25% (8% base rate plus 2.25% supplemental rate due to the CalSTRS Funding Plan), while CalSTRS 2% at 62 members are required to pay at least one-half of the normal cost of their DB Program benefit (rounded to the nearest quarter of 1%) as their base rate and an additional supplemental rate due to the CalSTRS Funding Plan.

For fiscal year 2025–26, CalSTRS 2% at 62 members paid 9% toward the normal cost and the additional 1.205% as per the CalSTRS Funding Plan for a total member contribution rate of 10.205%. The contribution rate for CalSTRS 2% at 62 members is adjusted if the normal cost increases or decreases by more than 1% since the last time the member contribution rate was set. Based on the June 30, 2025, funding actuarial valuation adopted by the board in May 2026, the increase in normal cost was less than 1%. Therefore, the contribution rate for CalSTRS 2% at 62 members will not change effective July 1, 2026.

Member contribution rates as described above and effective for fiscal years 2025–26 and 2026–27 are summarized below:

Effective date	CalSTRS 2% at 60 members	CalSTRS 2% at 62 members
July 1, 2025	10.250%	10.205%
July 1, 2026	10.250%	10.205%

Employers

Employers are required to contribute a base contribution rate set in statute at 8.25%. Pursuant to the CalSTRS Funding Plan, employers also contribute an additional amount on all compensation that is creditable to the DB Program to eliminate their share of the CalSTRS unfunded actuarial obligation by 2046. The CalSTRS Funding Plan authorizes the board to adjust this amount, also known as the employer supplemental contribution rate, up or down by a maximum of 1% for a total rate of no higher than 20.25% and no lower than 8.25%. In May 2026, the board voted to keep the employer supplemental contribution rate at 10.85% for fiscal year 2026–27 for a total employer contribution rate of 19.10%.

Employer contribution rates as described above and effective for fiscal year 2025–26 and beyond are summarized below:

Effective date	Base rate	Supplemental rate per CalSTRS Funding Plan	Total rate
July 1, 2025	8.250%	10.850%	19.100%
July 1, 2026	8.250%	10.850%	19.100%
July 1, 2027—June 30, 2046	8.250%	[1]	[1]
July 1, 2046	8.250%	Increase from AB 1469 not applicable in 2046–47 and beyond	

[1] The CalSTRS Funding Plan authorizes the board to adjust the employer contribution rate up or down by up to 1% each year, but no higher than 20.25% and no lower than 8.25%.

State

The state is required to contribute a base contribution rate set in statute at 2.017% of the total compensation that is credited to the DB Program. Pursuant to the CalSTRS Funding Plan, the state also has a supplemental contribution rate, which the board can increase by no more than 0.5% each fiscal year to help eliminate the state's share of the CalSTRS unfunded actuarial obligation by 2046. In May 2026, the board voted to keep the state supplemental contribution rate at 6.311% for fiscal year 2026–27.

The total state contribution rate also includes a portion to fund the SBMA, which provides inflation protection to CalSTRS members whose current purchasing power has fallen below 85% of the purchasing power of their initial benefit. The SBMA is funded through a continuous appropriation from the state's General Fund in an amount equal to 2.5% of the total creditable compensation of the fiscal year ended in the immediately preceding calendar year, reduced by $72.0 million, pursuant to California Education Code section 22954. The total state contribution rate is 10.828% effective July 1, 2026.

State contribution rates as described above and effective for fiscal year 2025–26 and beyond are summarized below:

Effective date	Base rate	Supplemental rate per CalSTRS Funding Plan	SBMA funding	Total
July 1, 2025	2.017%	6.311%	2.500%	10.828%
July 1, 2026	2.017%	6.311%	2.500%	10.828%
July 1, 2027—June 30, 2046	2.017%	[1]	2.500%	[1]
July 1, 2046	2.017%	[2]	2.500%	[2]

1 The board has limited authority to adjust the state contribution rate annually through June 2046 to eliminate the remaining unfunded actuarial obligation. The board cannot increase the supplemental rate by more than 0.5% in a fiscal year, and if there is no unfunded actuarial obligation, the supplemental contribution rate would be reduced to 0%.

2 From July 1, 2046, and thereafter, the board has limited authority to adjust the state contribution rate to fund the normal cost deficit or the unfunded obligation. The board cannot adjust the supplemental rate by more than 0.25% per year, and the supplemental rate may not exceed 1.505% in total. If there is neither an unfunded obligation nor a normal cost deficit, the supplemental contribution rate would be reduced to 0%.

STRP Defined Benefit Supplement Program

The DBS Program, established pursuant to California Education Code section 25000, is a cash balance defined benefit pension program that operates within the STRP. All members of the DB Program have an account under the DBS Program and are eligible to receive a DBS benefit based on the amount of funds contributed, interest credited and additional earnings credits awarded to their DBS account.

Interest is credited to the nominal DBS Program accounts at the minimum guaranteed annual rate established by the board prior to each plan year, which was 4.48% for the fiscal year ended June 30, 2026. The board may credit additional earnings to members' nominal accounts if actual investment earnings exceed the minimum guaranteed annual rate and meet criteria set out in the board policy.

In May 2026, the board elected to award an additional earnings credit (AEC) of 4.53% of DBS members' June 30, 2025, nominal account balances. The total value of the AEC awarded was approximately $614.0 million.

Contributions

For creditable service performed by DB Program members in excess of one year of service credit within one fiscal year, member contributions of either 8% (CalSTRS 2% at 60 members) or 9% (CalSTRS 2% at 62 members) and employer contributions of 8% are credited to the members' nominal DBS Program accounts (up to any applicable compensation cap). For CalSTRS 2% at 60 members only, member contributions of 8% and employer contributions of 8% for compensation as a result of limited-term payments or compensation determined to have been paid to enhance their DB Program benefits are also credited to DBS Program accounts.

STRP Cash Balance Benefit Program

The CBB Program, established and subsequently merged into the STRP pursuant to California Education Code section 26000, is a cash balance defined benefit pension program. The CBB Program is designed for employees of California's public schools who are hired to perform creditable service for less than 50% of the full-time equivalent for a position in a school district or county office of education or on a part-time or temporary basis in a community college district.

Participation in the CBB Program is optional; a school district, community college district, county office of education, charter school or regional occupational program may elect to offer the CBB Program. Under such election, the program will automatically cover each eligible employee, unless the employee elects to participate in the DB Program or an alternative plan provided by the employer within 60 days of hire or the election period determined by the employer. As of June 30, 2026, there were 29 employers reporting payroll data through 28 reporting entities for 8,416 contributing participants. Additionally, there were 31,219 inactive participants as of the same date.

Interest is credited to nominal CBB Program accounts at the minimum guaranteed annual rate established by the board prior to each plan year, which was 4.48% for the fiscal year ended June 30, 2026. The board may credit additional earnings to members' nominal accounts if actual investment earnings exceed the minimum guaranteed annual rate and meet criteria pursuant to the board policy. In May 2026, the board elected to award an AEC of 2.81% of CBB members' June 30, 2025, nominal account balances. The total value of the AEC awarded was approximately $13.1 million.

Contributions

A summary of statutory minimum contribution rates for the CBB Program is as follows:

Participants – 4.0% of applicable participant salaries

Employers – 4.0% of applicable participant salaries

Employers may enter into a collective bargaining agreement to pay different rates if certain minimum conditions are met.

STRP Replacement Benefits Program

The RB Program is an excess benefits arrangement for DB Program members that is administered as a qualified excess benefit arrangement through a separate pension program apart from the other three STRP programs. It was created pursuant to California Education Code section 24260 and is established in accordance with IRC section 415(m). IRC section 415(b) imposes a dollar limit on the annual retirement benefits an individual may receive from a qualified defined benefit pension plan. The limit for individual CalSTRS 2% at 60 members varies based on the age at which they retire. For calendar year 2026, the federal dollar limit applicable to a CalSTRS member retiring at exactly age 65 and receiving only a single-life benefit from the DB Program is $246,847. The federal dollar limit for other ages at retirement and other benefit types will differ.

Employer contributions that would otherwise be credited to the DB Program each month are instead credited to the RB Program to fund monthly program costs. Monthly employer contributions are received and paid to members in amounts equivalent to the benefits not paid as a result of IRC section 415(b), subject to withholding for any applicable income or employment taxes. As of June 30, 2026, there were 188 retirees, beneficiaries and nonmember spouses receiving benefits from the RB Program.

CalSTRS Pension2 Personal Wealth Plan

The CalSTRS Pension2 Personal Wealth Plan (Pension2) includes two tax-deferred defined contribution plans pursuant to IRC sections 403(b) and 457(b), which were established by California Education Code sections 24950 and 24975, respectively. Voya Institutional Plan Services (Voya) is responsible for administrative services, including custody and record-keeping, while CalSTRS determines the investment options that are offered to plan participants.

The 403(b) plan and the 457(b) plan had 36,260 and 3,355 plan participants and 1,136 and 242 participating employers, respectively, with account balances as of June 30, 2026. Pension2 is only available to all full-time California prekindergarten through community college district and county office of education employees. Part-time employees' eligibility is determined by their employers. Enrollment in the 457(b) plan is by employer adoption only.

Employee contributions to the plans are voluntary and require no minimum limitations; however, the IRC imposes an annual maximum amount that can be contributed to the plans. Pension2 is not directly affected by the California Public Employees' Pension Reform Act of 2013 (PEPRA). However, according to PEPRA, employers may provide a contribution to a defined contribution plan, such as Pension2, for CalSTRS 2% at 62 member compensation in excess of the compensation limit.

Pension2 investments are composed of a selection of mutual funds with underlying investments that include stocks, bonds, real estate investments and guaranteed annuity contracts, which are participant directed. The Pension2 benefits are the accumulation of contributions and investment earnings credited to the members' accounts.

Medicare Premium Payment Program

The MPP Program is a cost-sharing multiple-employer other postemployment benefit (OPEB) plan administered by CalSTRS through the Teachers' Health Benefits Fund, which was established pursuant to California Education Code section 25930. The MPP Program pays Medicare Part A premiums and Medicare Parts A and B late enrollment surcharges for eligible members of the DB Program who were retired or began receiving a disability allowance prior to July 1, 2012, and were not eligible for premium-free Medicare Part A. Members who enrolled in Medicare after July 1, 2012, are not eligible for CalSTRS' payment of late enrollment surcharges. Also, members who retire on or after July 1, 2012, are not eligible for coverage under the MPP Program.

As of June 30, 2026, 3,327 retirees participated in the MPP Program; however, the number of retired members who will participate in the program in the future is unknown as eligibility cannot be predetermined.

The MPP Program is funded on a pay-as-you-go basis from a portion of monthly employer contributions. In accordance with California Education Code section 22950, contributions that would otherwise be credited to the DB Program each month are instead credited to the MPP Program to fund monthly program and administrative costs. Total redirections to the MPP Program are monitored to ensure that total incurred costs do not exceed the amount initially identified as the cost of the program.

Teachers' Deferred Compensation Fund

The TDCF was established pursuant to California Education Code section 24976 and is used to account for ancillary activities associated with deferred compensation plans and programs offered by CalSTRS to enhance the tax-deferred financial options for the members and their beneficiaries.

The TDCF is funded by the fee revenues received by CalSTRS from deferred compensation plans and a vendor registration program.

2. Summary of significant accounting policies

Basis of accounting

CalSTRS maintains accounting records using the accrual basis of accounting. We recognize member, employer and state contributions in the period in which the contributions are due pursuant to legal requirements. Also, CalSTRS recognizes benefits when due and payable in accordance with our retirement and benefits plans and programs.

Purchases and sales of investments are recorded on the trade date. Interest income is recorded when earned. Dividends are recorded on the ex-dividend date.

Use of estimates in the preparation of financial statements

CalSTRS' financial statements are prepared in conformity with accounting principles generally accepted in the U.S. as promulgated by the Governmental Accounting Standards Board (GASB). Management makes estimates and assumptions that affect certain amounts and disclosures in the accompanying financial statements, the most significant of which include estimates related to contribution revenues, total pension liability, total OPEB liability and the fair value of certain alternative investments.

New accounting standards

CalSTRS reviews the requirements of all new GASB pronouncements and their impact on our financial statements. For the fiscal year ended June 30, 2026, there was no material impact to CalSTRS' financial statements resulting from the implementation of GASB standards.

Cash

Cash held by CalSTRS includes foreign currency, deposits with the California State Treasurer's Office (STO) and global custodian (State Street Bank) and cash held at commercial banks for operational purposes. CalSTRS maintains a targeted balance within the Pooled Money Investment Account (PMIA) held with the STO to meet daily obligations. Cash balances in excess of needs are swept nightly into PMIA and invested in short-term assets by the STO. In addition to the PMIA account, CalSTRS also operates checking accounts and zero balance accounts with various banking institutions authorized to provide services to state agencies. While zero balance accounts do not require collateralization, other non-zero balance accounts have a collateralization requirement set forth by the California Government Code section 16521 and are monitored by the STO.

Investments

Under the California Constitution, the board has the sole and exclusive fiduciary responsibility over the assets of the system. The constitution also requires the diversification of investments to minimize the risk of loss and maximize the rate of return, unless, under the circumstances, it is clearly not prudent to do so.

As an administrator of public pension funds, CalSTRS is not subject to the Employee Retirement Income Security Act (ERISA), which governs corporate pension plans. However, our investment decision-making criteria are based on the "prudent investor" standard, for which the ERISA standards serve as a basis.

To manage growth of assets in a prudent manner, the CalSTRS Investment Policy Statement (IPS) provides a framework for the operation of the investment portfolio and may be amended by a majority vote of the board. It allows for investments consisting of debt and equity securities, alternative investments and derivative instruments. See Note 5 for disclosures on deposits and investments.

In the statement of changes in fiduciary net position, we present the net appreciation (depreciation) in the fair value of our investments, which consists of the realized gains and losses on securities sold and the unrealized appreciation (depreciation) on those investments still held in the portfolio.

The value and performance of CalSTRS' investments are subject to various risks, including credit risk, interest rate risk, concentration of credit risk, custodial credit risk and foreign currency risk, which are in turn affected by economic and market factors affecting certain industries, sectors or geographies. See Note 5 for disclosures related to these risks.

Most investments are reported at fair value. The diversity of the investment types held by CalSTRS requires a wide range of valuation techniques to determine fair value. See Note 6 for disclosures related to fair value.

Expenses directly associated with investment management, operations and servicing, as well as foreign taxes, have been included as other investment expenses in the statement of changes in fiduciary net position. The schedule of investment expenses in the other supplementary information section of this report provides a listing of investment expenses by type. Certain costs such as carried interest, private asset manager fees and broker commissions for securities trades are included in the cost basis of the investment, with the exception of broker commissions for certain equity securities and derivative instruments for which they are expensed.

Investment risk management

To protect the value of non-U.S. investments against foreign currency fluctuation, CalSTRS enters into currency forwards and option contracts. CalSTRS could be exposed to risk if the counterparties to the forward and option contracts are unable to meet the terms of their contracts. CalSTRS also enters into futures contracts, swaps and options to reduce portfolio risks and volatility. CalSTRS seeks to minimize risk from counterparties by establishing minimum credit quality standards and through the use of master trading agreements, which require a daily exchange of collateral that is marked to market as required to help offset counterparty risk. See Note 5 for disclosures related to these risks.

Capital assets

Capital assets held by CalSTRS (which consist of land, building, equipment and intangible assets) are recorded at cost and reflected on the statement of fiduciary net position, net of accumulated depreciation/amortization. The capitalization threshold is $1.0 million. Depreciation/amortization is charged to operations using the straight-line method on the estimated useful life of the related asset and is included in administrative expenses on the statement of changes in fiduciary net position. Generally, estimated useful lives range from a minimum of more than one year to 40 years. As of June 30, 2026, accumulated depreciation/amortization was $183.1 million, and depreciation/amortization expense was $48.8 million for the fiscal year ended June 30, 2026.

CalSTRS reviews our capital assets for impairment whenever events or changes in circumstances indicate the carrying value of an asset may not be recoverable. As of June 30, 2026, there has been no impairment of capital assets.

Interest cost incurred before the end of the construction period of an asset is recognized as an expense in the period in which the cost is incurred.

Bonds payable

Bonds payable are carried at their outstanding principal balances plus unamortized bond premiums. The bond premium received in the issuance of the bonds is amortized as a reduction to interest expense over the term of the bonds using the straight-line method.

Administrative expenses

The cost of administering CalSTRS is financed through contributions and investment earnings. The schedule of administrative expenses in the other supplementary information section of this report provides a listing of administrative expenses by type.

Income taxes

The STRP and MPP Program are organized as tax-exempt retirement plans under the IRC. Pension2, which includes IRC 403(b) and 457(b) plans, and the TDCF are organized as tax-deferred supplemental programs under the IRC. CalSTRS management believes that it has operated these funds and programs within the constraints imposed by federal tax law.

Securities sold short

Securities sold short represent obligations to deliver borrowed securities to the lenders of equity securities. These obligations are valued at the last quoted price or official closing prices taken from the primary markets and exchanges in which each security trades. The gains and losses from the changes in fair valuation are reported within net appreciation (depreciation) on the statement of changes in fiduciary net position.

Securities lending transactions

CalSTRS reports securities lent, reinvested cash collateral and the related liabilities resulting from securities lending transactions on the statement of fiduciary net position. CalSTRS also reports the income earned and costs of lending securities as investment income and expenses on the statement of changes in fiduciary net position.

Reverse repurchase agreement transactions

CalSTRS reports the liabilities resulting from the reverse repurchase agreements as obligations under reverse repurchase agreements, and the underlying securities used as collateral are reported as investments on the statement of fiduciary net position. Any interest cost associated with the reverse repurchase agreements is reported as investment expenses on the statement of changes in fiduciary net position.

Reserves

CalSTRS maintains reserve accounts for various operating purposes within net position restricted for pensions/OPEB. These include four reserve accounts for the DBS Program, four reserve accounts for the CBB Program, one reserve account for the SBMA and a combination of other reserve accounts not legally required for disclosure.

Defined Benefit Supplement Contribution, Accumulated Interest and Annuitant reserves

Section 25002 of the California Education Code formed the DBS Annuitant Reserve to establish and maintain a segregated account for expenditures on annuities payable under the DBS Program. The DBS Program is a cash balance defined benefit pension program that provides a supplemental benefit in addition to the regular DB Program benefit. During a member's career, credits and interest accumulate in the DBS Program's Contribution and Accumulated Interest reserves, respectively. When a member retires, the reserve funds are either paid out as a lump sum or transferred to the DBS Annuitant Reserve if the participant elects to receive their benefit as an annuity.

Defined Benefit Supplement Gain and Loss Reserve

Section 25001 of the California Education Code establishes the DBS Gain and Loss Reserve, which represents a segregated account that may be used to: 1) credit interest to member DBS accounts at the minimum interest rate for plan years in which the obligation cannot be met from the plan's investment earnings, 2) make additional earnings credits to DBS accounts upon a decision by the board to allocate excess investment earnings, or 3) provide additions to the DBS Annuitant Reserve for annuities payable under the DBS Program.

Cash Balance Benefit Active Contribution, Accumulated Interest and Annuitant reserves

Section 26204 of the California Education Code establishes the CBB Annuitant Reserve for the payment of monthly annuities with respect to the CBB Program. The CBB Program is an optional cash balance defined benefit pension plan for part-time certificated educators available to CalSTRS employers as an alternative to the DB Program, Social Security and other retirement plans. During a participant's career, credits and interest accumulate in the Cash Balance Benefit Active Contribution and Accumulated Interest reserves. When a participant retires, the reserve funds are either paid out as a lump sum or transferred to the Cash Balance Benefit Annuitant Reserve if the participant elects to receive their benefit as an annuity.

Cash Balance Benefit Gain and Loss Reserve

Section 26202 of the California Education Code establishes the CBB Gain and Loss Reserve, which may be used to: 1) credit interest to participants' accounts at the minimum interest rate during years in which CalSTRS' investment earnings with respect to the CBB Program are not sufficient for that purpose, 2) make additional earnings credits to participants' accounts upon a decision by the board to allocate excess investment earnings, or 3) provide additions to the CBB Annuitant Reserve for monthly annuity payments.

Supplemental Benefit Maintenance Account Reserve

Section 22400 of the California Education Code establishes the SBMA to separately maintain and manage annual supplemental payments disbursed in quarterly installments to all benefit recipients whose purchasing power has fallen below 85% of the purchasing power of the initial benefit, as long as funds are available. The SBMA is primarily funded by contributions from the state and the interest earned on the SBMA reserve balance credited at the actuarially assumed interest rate.

Other reserves not legally required for disclosure

These represent accumulated changes in operations reflecting contributions earned, benefit payments made, investment returns and the costs of plan administration for the DB Program (excluding SBMA), Pension2, MPP Program and TDCF.

The reserve balances as of June 30, 2026, are summarized in the table below:

Reserve type	Reserve balance (dollars in thousands)
Defined Benefit Supplement Contribution Reserve	$10,677,193
Defined Benefit Supplement Accumulated Interest Reserve	3,807,552
Defined Benefit Supplement Annuitant Reserve	669,592
Defined Benefit Supplement Gain and (Loss) Reserve	8,160,177
Cash Balance Benefit Active Contribution Reserve	378,394
Cash Balance Benefit Accumulated Interest Reserve	126,459
Cash Balance Benefit Annuitant Reserve	9,208
Cash Balance Benefit Gain and (Loss) Reserve	140,048
Supplemental Benefit Maintenance Account Reserve	31,296,770
Other reserves not legally required for disclosure	368,059,359
TOTAL	**$423,324,752**

3. Net pension liability of employers and nonemployer contributing entity

The components of the net pension liability (NPL) of the STRP for participating employers and the state (nonemployer contributing entity) as of June 30, 2026, are as follows:

Components of the NPL — STRP[1]

	(dollars in millions)
Total pension liability	$452,253
Less: STRP fiduciary net position	419,720
NPL of employers and the State of California	**$32,533**
STRP fiduciary net position as a percentage of the total pension liability	92.8%

1 Includes all plans and programs in the STRP.

Actuarial methods and assumptions

The total pension liability for the STRP was determined by applying update procedures to the financial reporting actuarial valuation as of June 30, 2025, and rolling forward the total pension liability to June 30, 2026. Significant actuarial methods and assumptions used in the financial reporting actuarial valuation to determine the total pension liability as of June 30, 2026, include:

Valuation date	June 30, 2025
Experience study[1]	July 1, 2007–June 30, 2022
Actuarial cost method	Entry age actuarial cost method
Investment rate of return[2]	7.10%
Consumer price inflation	2.75%
Wage growth	3.50%
Postretirement benefit increases	2% simple for DB (annually) Maintain 85% purchasing power level for DB, not applicable for DBS/CBB

1 Both a five-year period (July 1, 2017–June 30, 2022) and 15-year period were considered in the 2024 experience study; however, assumptions were primarily based on the results of the 15-year study. Additional information is available in the 2024 experience analysis report available at CalSTRS.com.

2 Net of investment expenses but gross of administrative expenses.

The sections that follow provide additional discussion on key assumptions and methods for the valuation of the STRP.

Discount rate

The discount rate used to measure the total pension liability was 7.10%, which was unchanged from the prior fiscal year. The projection of cash flows used to determine the discount rate assumed that contributions from plan members and employers are made at statutory contribution rates in accordance with the rate increases as disclosed in Note 1. Projected inflows from investment earnings were calculated using the long-term assumed investment rate of return of 7.10% and assume that contributions, benefit payments and administrative expenses occur midyear.

Based on those assumptions, the STRP's fiduciary net position was projected to be available to make all projected future benefit payments to current plan members. Therefore, the long-term assumed investment rate of return was applied to all periods of projected benefit payments to determine the total pension liability.

The long-term investment rate of return assumption was determined using a building-block method in which best-estimate ranges of expected future real rates of return are developed for each major asset class/strategy. Expected real rates of return are net of our 2.75% inflation assumption and are derived from best-estimate ranges of 20- to 30-year geometrically linked expected returns. These best-estimate ranges were developed using capital market assumptions from CalSTRS investment staff and investment consultants as inputs to the process.

The actuarial investment rate of return assumption was adopted by the board in January 2024 in conjunction with the most recent experience study. For each current and future valuation, CalSTRS' independent consulting actuary (Milliman) reviews the return assumption for reasonableness based on the most current capital market assumptions. The assumed asset allocation and best estimates of the expected rates of return for each major asset class/strategy as of June 30, 2026, are summarized in the following table:

Asset class/ Strategy	Assumed asset allocation	Long-term expected rate of return[1]	Long-term expected real rate of return[1,2]
Public Equity	38.0%	8.00%	5.25%
Real Estate	15.0%	6.80%	4.05%
Private Equity	14.0%	9.50%	6.75%
Fixed Income	14.0%	5.20%	2.45%
Risk Mitigating Strategies	10.0%	5.00%	2.25%
Inflation Sensitive	7.0%	6.40%	3.65%
Cash/Liquidity	2.0%	2.80%	0.05%

1 20- to 30-year geometric average.

2 Real rates of return are net of assumed 2.75% inflation.

Sensitivity of NPL to changes in the discount rate

Presented below is the NPL of employers and the state using the current discount rate as well as what the NPL would be if it were calculated using a discount rate that is 1% to 3% lower or 1% to 3% higher than the current rate:

Discount rate	NPL of employers and nonemployer contributing entity (dollars in millions)
3% decrease (4.10%)	$245,626
2% decrease (5.10%)	160,530
1% decrease (6.10%)	90,479
Current rate (7.10%)	32,533
1% increase (8.10%)	(15,818)
2% increase (9.10%)	(56,494)
3% increase (10.10%)	(90,843)

Mortality

CalSTRS uses a generational mortality assumption, which is based off generational mortality tables that reflect expected future improvements in mortality and includes a base table and a projection table. The base mortality tables are CalSTRS custom tables derived to best fit the patterns of mortality amongst our members. The projection table reflects the expected annual reduction in mortality rates at each age. The current mortality assumption uses a base year of 2023, and projected improvement is based on the MP–2021 Ultimate Projection Scale.

4. Net other postemployment benefit (OPEB) liability of employers

The components of the net OPEB liability of the MPP Program for participating employers as of June 30, 2026, are as follows:

Components of the net OPEB liability — MPP Program

	(dollars in thousands)
Total OPEB liability	$204,851
Less: MPP Program fiduciary net position	(2,244)
Net OPEB liability of employers	**$207,095**
MPP Program fiduciary net position as a percentage of the total OPEB liability	(1.10%)

Actuarial methods and assumptions

The total OPEB liability for the MPP Program as of June 30, 2026, was determined by applying update procedures to the financial reporting actuarial valuation as of June 30, 2025, and rolling forward the total OPEB liability to June 30, 2026. Significant actuarial methods and assumptions used in the financial reporting actuarial valuation to determine the total OPEB liability as of June 30, 2026, include:

Valuation date	June 30, 2025
Experience study[1]	July 1, 2007–June 30, 2022
Actuarial cost method	Entry age actuarial cost method
Investment rate of return	4.67%
Medicare Part A premium costs trend rate[2]	5.0%
Medicare Part B premium costs trend rate[2]	6.5%

1 The MPP Program uses some of the same assumptions as used for the STRP and includes some additional assumptions that are specific to the MPP Program. As such, the experience study dates reflect the range used in Note 3 for the STRP; however, experience from June 30, 2014, through June 30, 2022, was also evaluated for assumptions specific to the MPP Program.

2 The assumed increases in the Medicare Part A and Part B cost trend rates vary by year; however, the increases are approximately equivalent to a 5.0% and 6.5% increase each year for Medicare Part A and Part B premiums, respectively.

The sections that follow provide additional discussion on specific assumptions and methods for the valuation of the MPP Program.

Discount rate

The MPP Program is funded on a pay-as-you-go basis with contributions generally being made at the same time and in the same amount as benefit payments and expenses coming due. Any funds within the MPP Program as of June 30, 2026, were to manage differences between estimated and actual amounts to be paid and were invested in the Surplus Money Investment Fund (SMIF), which is a pooled investment program administered by the California State Treasurer.

As the MPP Program is funded on a pay-as-you-go basis, the OPEB plan's fiduciary net position was not projected to be sufficient to make projected future benefit payments. Therefore, the MPP Program used the Bond Buyer's 20-Bond GO Index from Bondbuyer.com as of June 30, 2026, as the discount rate, which was applied to all periods of projected benefit payments to measure the total OPEB liability. The discount rate as of June 30, 2026, was 4.67%, which is a decrease of 0.53% from 5.20% as of June 30, 2025.

Sensitivity of the net OPEB liability to changes in the discount rate

Presented below is the net OPEB liability of employers using the current discount rate as well as what the net OPEB liability would be if it were calculated using a discount rate that is 1% lower or 1% higher than the current rate:

Discount rate	Net OPEB liability of employers (dollars in thousands)
1% decrease (3.67%)	$221,535
Current discount rate (4.67%)	207,095
1% increase (5.67%)	194,259

Future enrollment

Assumptions were made about future participation (enrollment) in the MPP Program as CalSTRS is unable to determine which members not currently participating meet all eligibility criteria for enrollment in the future. Assumed enrollment rates were derived based on past experience and are stratified by age with the probability of enrollment diminishing as the members' ages increase. This estimated enrollment rate was then applied to the population of members who may meet criteria necessary for eligibility but are not currently enrolled in the MPP Program. Based on this, the estimated number of future enrollments used in the financial reporting valuation was 112 or an average of 0.09% of the potentially eligible population of 119,954.

Mortality

CalSTRS uses a generational mortality assumption, which is based off generational mortality tables that reflect expected future improvements in mortality and includes a base table and projection table. The base mortality tables are CalSTRS custom tables derived to best fit the patterns of mortality among our members. The projection table reflects the expected annual reduction in mortality rates at each age. The current mortality assumption uses a base year of 2023, and projected improvement is based on the MP–2021 Ultimate Projection Scale.

Medicare costs trend rate

The June 30, 2025, financial reporting actuarial valuation uses the 2026 Medicare Part A and Part B premiums as the basis for future premium calculations. Future premiums are assumed to increase with a medical trend rate that varies by year, as shown in the following table:

Trend assumption

Years[1]	Assumed annual increase Part A	Part B
2023–2032	5.4%	6.6%
2033–2042	4.9%	5.6%
2043–2052	4.3%	4.5%
2053 and later	4.1%	4.3%

[1] Trend rates indicate medical inflation in the specific year and, therefore, affect the premiums for the following years. For example, the projected 2026–27 premium is the 2025–26 premium increased by the assumed 2025–26 trend rate.

The Part A trend is approximately equivalent to assuming a fixed 5.0% increase each year. The Part B trend is approximately equivalent to assuming a fixed 6.5% increase each year.

Presented below is the net OPEB liability of employers using the current Medicare costs trend rates, as well as what the net OPEB liability would be if it were calculated using Medicare costs trend rates that are 1% lower and 1% higher than the current rate:

Medicare costs trend rate	Net OPEB liability of employers (dollars in thousands)
1% decrease (4.0% Part A and 5.5% Part B)	$193,296
Current rates (5.0% Part A and 6.5% Part B)	207,095
1% increase (6.0% Part A and 7.5% Part B)	222,347

Use of assumptions and methods

Actuarial valuations of an ongoing plan involve estimates of the value of reported amounts (such as Medicare premiums) and assumptions about the probability of the occurrence of events far into the future (such as mortality, disabilities and retirees eligible for the program). Actuarially determined amounts are subject to continual review and potential modifications, as actual results are compared with past expectations and new estimates are made about the future.

Projections of benefits for financial reporting purposes are based on the substantive plan and include the types of benefits provided at the time of each valuation and the historical pattern of benefit costs. The projection of benefits for financial reporting purposes does not explicitly incorporate the potential effects of legal or contractual funding limitations.

Actuarial calculations reflect a long-term perspective and take into account the premiums and surcharges paid after termination of employment until the death of the employee. In many cases, actuarial calculations reflect several decades of payments after termination of employment.

5. Deposits and investments

Money-weighted rate of return

For the fiscal year ended June 30, 2026, the money-weighted rate of return on STRP investments, net of pension plan investment expenses, was 14.1%. Although the MPP Program is funded on a pay-as-you-go basis, funds held within the program are used to manage differences between estimated and actual amounts and were invested in the SMIF. The money-weighted rate of return on MPP Program investments, net of OPEB plan investment expenses, was 4.1%. The money-weighted rate of return expresses investment performance, taking into account the impact of cash infusion into and disbursements from the pension or OPEB plan.

Schedule of investments

CalSTRS is authorized to invest and reinvest the monies of the system to meet the objectives of the IPS as established by the board.

The table on the following page represents the investments by type as presented in the statement of fiduciary net position, including detailed investments within debt securities, equity securities, alternative investments and derivative instruments.

Schedule of investments

As of June 30, 2026

(dollars in thousands)

	State Teachers' Retirement Plan	Pension2 403(b) Plan	Pension2 457(b) Plan	Medicare Premium Payment Program	Teachers' Deferred Compensation	Total

Debt securities

Debt securities consist primarily of long-term investments issued by the U.S. government and U.S. government-sponsored agencies, municipal securities, foreign governments and corporations as well as securitized offerings (backed by residential and commercial mortgages, consumer and commercial loans and receivables) and inflation-indexed bonds. Debt securities also consist of short-term securities that by definition typically have maturities of less than one year. Debt securities in Pension2 include securities such as bond mutual funds and guaranteed annuity contracts. The annuity contracts offer a guaranteed minimum interest rate for the life of the contract.

Short-term investments consist of U.S. Treasury bills, money market funds, certificates of deposits and similar instruments with maturities and/or holding periods generally of less than one year. Deposits in the PMIA (classified under short-term securities), administered by the STO, represent various investments with approximately 269 average days to maturity. The STO pools these monies with those of other state agencies for investing in short-term securities. The monies are available for withdrawal at any time. Deposits in the Short-Term Investment Fund, administered by State Street Bank, represent various investments with approximately 44 average days to maturity.

Equity securities

Equity securities primarily include domestic and international common stocks, along with exchange-traded funds (ETFs), stock mutual funds, real estate investment trusts (REITs), depository receipts and preferred stocks.

Alternative investments

Alternative investments consist primarily of limited partnership structures invested in privately held debt or privately held equity, including venture capital, leveraged buyouts and co-investments, as well as investments in real estate, infrastructure, agriculture and timberland. They include investments held within the Private Equity, Real Estate, Fixed Income, Public Equity, Risk Mitigating Strategies, Inflation Sensitive and Collaborative Strategies asset classes. Alternative investments also include investments from the Sustainable Investment and Stewardship Strategies (SISS).

Alternative investments are generally long-term and illiquid in nature. As a result, investors are subject to redemption restrictions, which generally limit distributions and restrict the ability of limited partners to exit a partnership investment prior to its dissolution.

Investments in real estate directly held assets are in separate accounts and joint ventures, which are primarily composed of retail, office, industrial and multifamily properties. Certain real estate investments are leveraged through partnerships using a combination of equity contributions from CalSTRS and other investors and through the use of debt. CalSTRS engages real estate advisors and operating partners who are responsible for managing a portfolio's day-to-day activities, performance and reporting. Real estate non-directly held investments primarily include commingled limited partnership investments in which CalSTRS does not have a controlling interest.

Derivative instruments

CalSTRS holds investments in derivative instruments, such as futures, foreign currencies forward contracts, options, swaps, rights and warrants.

A futures contract is an exchange-traded contract whereby the purchaser agrees to buy an asset at a stated price on a specific future date. A foreign currency forward contract is a customized, bilateral agreement to exchange a specified currency at a specified future settlement date at a forward price agreed to on the trade date.

CalSTRS invests in exchange-traded options and over-the-counter options. An option is a contract that entitles the holder to purchase or sell a specific amount of contracts or notional amount at a specified price (strike price). The underlying asset, quantity of the underlying or notional amount, expiration date and strike price are standardized for exchange-traded options and are customized for over-the-counter options.

Swaps are derivative instruments in which two parties agree to exchange one stream of cash flows against another stream or a guarantee. These streams are called the legs of the swap, and usually at least one leg has a rate that is variable. The variable leg can depend on a reference rate, the total return of an asset or an economic statistic. Cash flows are calculated based on a notional amount, which are usually not exchanged between counterparties.

Rights and warrants held by CalSTRS are typically acquired through corporate actions. A right is a privilege granted to shareholders of a corporation to subscribe to shares of a new issue of common stock before it is offered to the public. A warrant gives the holder the right, but not the obligation, to buy an underlying equity security at a given price and quantity during a specified period.

Securities lending

California statutes and board policies permit CalSTRS to make short-term, collateralized loans of its securities to broker-dealers and other entities to earn incremental income. CalSTRS has contracted with our global custodian, third-party securities lending agents and their respective custodians to lend equity and debt securities. The majority of the security loans can be terminated on demand by either CalSTRS or the borrower. The underlying securities on loan are reported as assets on the statement of fiduciary net position.

Collateral, in the form of cash or other securities, is required for securities on loan. Consistent with market practice, CalSTRS requires cash collateral of 102% and 105% of the fair value for domestic and international securities, respectively, and between 102% and 108% when U.S. Treasuries or other non-cash instruments are provided.

As of June 30, 2026, the fair value of the securities on loan was $67.0 billion. The securities lending obligations were $51.2 billion and are reported in the statement of fiduciary net position as liabilities. The fair value of the reinvested cash collateral was $46.9 billion and is reported as securities lending collateral on the statement of fiduciary net position; the non-cash collateral was $17.8 billion; and the calculated mark (collateral adjustment requested for the next business day) was ($102.4) million. The reinvested cash collateral securities in this program are typically held to maturity and are expected to mature at par. Because most securities lending transactions are terminable at will, the duration of the loans generally does not match the duration of the investments made with the cash collateral. As of June 30, 2026, the weighted duration difference between the investments and these loans was approximately eight days. In addition to the reinvested collateral, CalSTRS transferred $4.5 billion of cash collateral to the total fund to support liquidity needs; these amounts are reported within the investment asset line items of the statement of fiduciary net position. Because securities loans may be terminated on demand, the maturities of the reinvested collateral within the total fund may not align with those of the loans, as the cash collateral may be invested in longer-duration or non-maturing investments.

In accordance with GASB Statement No. 28, *Accounting and Financial Reporting for Securities Lending Transactions*, the non-cash collateral of $17.8 billion is not reported in the statement of fiduciary net position as CalSTRS is not permitted to pledge or sell these collateral securities received unless the borrower defaults. The contracts with the securities lending agents require them to indemnify CalSTRS if the borrowers fail to return the securities (or if the collateral is not sufficient to replace the securities lent) or if the borrowers fail to pay CalSTRS for income distributions by the securities' issuers while the securities are on loan.

Bond proceeds investment

Bond proceeds investment represents the investment of the proceeds of the CalSTRS Series 2022 Bonds, which were issued in December 2022. The bonds were issued through the California Infrastructure and Economic Development Bank for the construction of CalSTRS' headquarters expansion, issuance costs and payment of interest during the construction period. Until the bond proceeds are needed, they are invested at the direction of CalSTRS. The investment of the proceeds is restricted to certain types of investment securities by the terms of the governing bond trust agreement.

The primary objectives of bond proceeds investment are the preservation of capital, liquidity and return on investment. Investment decisions are undertaken in a manner to preserve capital by mitigating credit and interest rate risk. Additionally, the bond proceeds investment portfolio is structured to have security maturities align with scheduled construction and interest payments.

Reverse repurchase agreements

State statutes and board policy permit the system to enter into reverse repurchase agreements, that is, a sale of securities with a simultaneous agreement to repurchase the same securities in the future at the same price plus a contract rate of interest. The system had $4.0 billion in reverse repurchase agreements outstanding (excluding accrued interest) as of June 30, 2026. The credit exposure related to these agreements was $8.4 million. Since the proceeds from reverse repurchase agreements are used for liquidity management, the maturities of the purchases made with the proceeds of reverse repurchase agreements are not matched to the maturities of the agreements.

Investment risk schedules

In accordance with GASB Statement No. 40, *Deposit and Investment Risk Disclosures–an amendment of GASB Statement No. 3*, the following investment risk schedules disclose CalSTRS' investments that are subject to certain types of risks, including credit risk, interest rate risk, concentration of credit risk, custodial credit risk and foreign currency risk. The policies addressing each risk are discussed in more detail in the pages that follow. These policies are contained within the IPS and are reviewed and approved annually by the board.

Credit risk

Credit risk is the risk that an issuer or other counterparty to a debt instrument will not fulfill its obligations. This is measured by the assignment of ratings by nationally recognized statistical rating organizations.

CalSTRS Investment Guidelines require that, at the time of purchase, at least 95% of the fair value of the corporate securities comprising the credit portion of the core Fixed Income Portfolio be rated investment grade.

The ratings used to determine the quality of the individual securities in the table below are the ratings provided by Standard & Poor's (S&P) Global Inc. Obligations issued or guaranteed by the U.S. government or government-sponsored agencies are eligible without limit. Furthermore, the total position of the outstanding debt of any non-agency mortgage-backed, asset-backed and commercial mortgage-backed securities issuer shall be limited to 10% of the fair value of the portfolio, on the basis of each separate trust (pool of assets), at the time of purchase. Obligations of other issuers are not to exceed 5% per issuer, at the time of purchase, of the fair value of any individual portfolio.

CalSTRS' investment policies and guidelines also include an allocation for opportunistic strategies, which allows for the purchase of bonds rated below investment grade. The amount of these investments that each investment manager may hold is negotiated on a manager-by-manager basis.

CalSTRS may invest in an unrated security if the security is comparable in quality to other rated securities that are eligible for purchase. The notation N/R represents those securities that are not rated, and N/A represents those securities for which the rating disclosure requirements are not applicable, such as obligations of the U.S. government and obligations explicitly guaranteed by the U.S. government.

As of June 30, 2026, the credit ratings of all debt securities are as follows:

Debt securities

Interest rate risk

Interest rate risk is the risk that changes in interest rates will adversely affect the fair value of an investment.

Investments may contain terms that increase the sensitivity of their fair values to increasing and decreasing interest rates. Although CalSTRS has investments that have an inherent prepayment risk as well as caps, floors and step-up features, these are mitigated through the diversification of asset classes, security selection, maturity and credit quality.

CalSTRS' investment policies and guidelines allow the core long-term investment grade portfolios the discretion to deviate the average duration of the portfolio within a range of +/– 20% (80% to 120%) of the weighted average effective duration of the performance benchmark.

As of June 30, 2026, the overall weighted effective duration and benchmark of the long-term Fixed Income portfolios were 5.59 years and 5.65 years, respectively. The following table presents the net asset values, durations and associated benchmarks by investment type held in the long-term Fixed Income portfolios.

Long-term fixed income duration

(dollars in thousands and duration in years)

Investment type (by portfolio)	Portfolio net asset value	Effective duration	Benchmark duration	Difference
Core portfolio				
Commercial mortgage-backed securities	$598,385	3.71	3.71	–
Credit obligations	10,558,229	6.45	6.49	(0.04)
Mortgage-backed securities	9,048,987	5.37	5.37	–
U.S. government and agency obligations	17,673,953	5.67	5.68	(0.01)
Debt opportunistic				
Corporate high yield	2,483,265	2.99	3.03	(0.04)

Leveraged loans	1,259,018	0.37	0.25	0.12
Special situations	275,619	5.27	5.65	(0.38)
TOTAL	**$45,424,903**			

The U.S. Treasury Inflation Protected Securities (TIPS), long-duration U.S. Treasury securities, mortgage-backed securities, and other debt securities in non-Fixed Income portfolios are not included in the previous table. The duration or weighted average maturity for these investments are as follows:

- The U.S. TIPS had a net asset value of $4.8 billion with an effective and benchmark duration of 6.34 years.
- The long-duration U.S. Treasury securities had a net asset value of $7.0 billion with an effective and benchmark duration of 15.36 years.
- Mortgage backed securities in non-Fixed Income portfolios had a fair value of $981.3 million with a weighted average maturity of 27.94 years.
- Other debt securities in non-Fixed Income portfolios had a fair value of $530.5 million with a weighted average maturity of 6.08 years.
- Cash and accruals totaling ($1.2) billion and swaps and other collateral totaling $285 thousand are included in the net asset value within the Fixed Income portfolios but are not included in debt securities on the statement of fiduciary net position.

As of June 30, 2026, the segmented time distribution for the short-term securities based upon the expected maturity or first reset dates is as follows:

Short-term fixed income segmented time distribution

(dollars in thousands)

The invested securities lending cash collateral is diversified among different investment types with the maximum remaining effective maturity of any instrument being three years at the time of purchase. The fund must remain liquid to meet collateral returns.

Pension2

Pension2 403(b) and 457(b) plans invest in Voya Fixed Plus III Traditional Annuities. The primary objectives of these investments are the guarantee of principal and a guaranteed minimum interest rate of 1.0% for the life of the contract. The interest rate guarantees under the contracts are subject to the claim-paying abilities of Voya Retirement Insurance and Annuity Company.

As of June 30, 2026, the weighted average maturity of investments with underlying debt holdings for the Pension2 403(b) and 457(b) plans on the statement of fiduciary net position are as follows:

Pension2 weighted average maturity

(dollars in thousands)

Investment type	Maturity	Fair value
Federated U.S. Treasury cash reserves	45 days	$35,636
Vanguard inflation-protected securities fund	7 years	84,518
Vanguard short-term bond index fund	2.9 years	22,893
Vanguard total bond market index fund	8.2 years	127,989
TOTAL		**$271,036**

Concentration of credit risk

Concentration of credit risk is the risk of loss attributed to the magnitude of CalSTRS' investment in a single issuer. The IPS states that no more than 3% of the total fund shall be invested in or exposed to any one security or corporation, with the exception of U.S. Treasury or agency obligations. As of June 30, 2026, this condition from the IPS was met. As such, no single issuer, excluding investments issued or explicitly guaranteed by the U.S. government and investments in mutual funds, external investment pools and other pooled investments, exceeded 5% of total investments.

Custodial credit risk

Custodial credit risk is the risk that if a depository institution or counterparty fails, CalSTRS would not be able to recover the value of our deposits, investments or collateral securities. As of June 30, 2026, all of CalSTRS non-cash investments are not exposed to custodial credit risk because they are held in CalSTRS' name. Demand and time deposits held by the various financial institutions and the state banks are insured up to $250,000 by the Federal Deposit Insurance Corporation or by collateral held by the STO or an agency of that office in the state's name. CalSTRS does not have a general policy relating to custodial credit risk.

Foreign currency risk

Foreign currency risk is the risk that changes in exchange rates will adversely affect the fair value of an investment or a deposit. As of June 30, 2026, CalSTRS' investment exposure in foreign currency risk is as follows:

Foreign currency risk

(dollars in thousands; in U.S. dollar equivalents)

CalSTRS' investments denominated in foreign currencies are reported within assets and liabilities on the statement of fiduciary net position.

Foreign currency is composed of international investment proceeds and income to be repatriated into U.S. dollars and funds available to purchase international securities. Foreign currency is held temporarily in foreign accounts until it is able to be repatriated or expended.

In accordance with the IPS, CalSTRS has established a strategic allocation to non-U.S. dollar public and private assets such as private equity investments and real estate. Considering this commitment to non-U.S. dollar assets and the impact currency fluctuations can have on the total return of dollar-based investors, CalSTRS has recognized the need to implement strategies designed to address the management of currency risk.

CalSTRS believes that our Currency Management Program should emphasize the protection of the value of its non-U.S. dollar public and private equity assets against a strengthening U.S. dollar first, yet recognizes that opportunities also exist for alpha generation (the ability to derive a return in excess of a market return) within the currency markets.

CalSTRS Fixed Income staff has management and oversight responsibilities for the Currency Management Program. The position range has been designed to allow for some degree of symmetry around the underlying exposure to the foreign-denominated assets within CalSTRS to both protect the translation value of the assets against a strengthening U.S. dollar and to enhance returns in a declining U.S. dollar environment.

As of June 30, 2026, the Pension2 403(b) and 457(b) plans do not expose CalSTRS to foreign currency risk.

Bond proceeds investment risk schedules

Bond proceeds were invested primarily in U.S. government and agency obligations. As of June 30, 2026, the bond proceeds investment does not expose CalSTRS to foreign currency and concentration of credit risk. Additionally, as of June 30, 2026, all of CalSTRS' non-cash bond proceeds investment is not exposed to custodial risk as it is held in CalSTRS' name.

As of June 30, 2026, the segmented time distribution for the bond proceeds investment based upon the expected maturity or first reset dates is as follows:

Bond proceeds investment segmented time distribution

(dollars in thousands)

Derivative instruments

As of June 30, 2026, the derivative instruments held by CalSTRS are considered investments and not hedges for accounting purposes. The term hedging, as it is used elsewhere in the notes to these financial statements, denotes an economic activity and not an accounting method. The gains and losses arising from this activity are recognized as incurred in the statement of changes in fiduciary net position.

All investment derivative instruments discussed below are included within the investment risk schedules. Investments in derivative instruments are disclosed separately to provide a comprehensive view of this activity and its impact on the overall investment portfolio.

Derivative instrument fair values are reported as investments in the statement of fiduciary net position with changes in fair values reported as investment income (loss) in the statement of changes in fiduciary net position.

The table below presents the related net change in fair value, fair value and notional amount of derivative instruments outstanding as of June 30, 2026.

Counterparty credit risk

The table below depicts the counterparty credit ratings of CalSTRS non-exchange traded investment derivative instruments outstanding and subject to loss as of June 30, 2026.

Counterparty credit rating

(dollars in thousands)

S&P rating	Commodity forward swaps long	Commodity forward swaps short	Credit default swaps written	Foreign currency forwards	Total return swaps long	Total return swaps short	Total
AA	$–	$633	$–	$62,757	$–	$–	$63,390
A	99	274	17	245,877	1,114	15,459	262,840
BBB	–	–	–	–	13,247	–	13,247
TOTAL	**$99**	**$907**	**$17**	**$308,634**	**$14,361**	**$15,459**	**$339,477**

The ratings used to determine the quality of the individual counterparty are S&P ratings. The aggregate fair value of investment derivative instruments in an asset position subject to counterparty credit risk as of June 30, 2026, was $339.5 million. This represents the maximum loss that would be recognized at the reporting date if all counterparties failed to perform as contracted. However, master agreements exist that call for daily exchange of collateral for the mark-to-market to minimize this risk.

CalSTRS may enter into a master netting arrangement with a counterparty. In the event of default or early termination, the master agreement permits the non-defaulting party the right to close out all transactions in a single net settlement to one net amount payable by one counterparty to the other. As of June 30, 2026, there were assets of $84.7 million, including collateral held by CalSTRS, and liabilities of $619.6 million from non-exchange traded derivative instruments subject to master netting agreements. As of June 30, 2026, CalSTRS did not have any significant exposure to counterparty credit risk with any single party.

Custodial credit risk

As of June 30, 2026, all of CalSTRS' investments in derivative instruments are held in CalSTRS' name or CalSTRS' nominee's name and are not exposed to custodial credit risk.

Interest rate risk

As of June 30, 2026, CalSTRS is exposed to interest rate risk on its derivative instruments described below by maturity period.

Investment maturities

Investment allocation policy

In accordance with GASB Statement No. 67, *Financial Reporting for Pension Plans—an amendment of GASB Statement No. 25*, and GASB Statement No. 74, *Financial Reporting for Postemployment Benefit Plans Other Than Pension Plans*, CalSTRS discloses investment policies pertaining to asset allocation and changes to any significant investment policies. The board approves the allocation of investment assets as described in the board governance manual. The key goal of the asset allocation process is to develop an asset allocation policy that maximizes the likelihood that the investment portfolio's assets will, over the planning horizon, fund plan benefits. CalSTRS conducts an asset allocation study every four years, or more frequently if there is a significant change in the liabilities or assets.

The asset allocation study involves a comprehensive review of the financial condition of the plan, including the actuarial requirements of the plan, such as future benefit payments and expected cash flow of contributions. The board adopted the current long-term asset allocation targets in May 2023. The long-term allocation plan is implemented in stages and includes a current target allocation for each asset class with ranges to keep the actual allocation close to the target while minimizing the transaction costs that result from rebalancing.

The following table displays the previous and current board-approved target allocation, the policy range and the actual allocation for the STRP per the portfolio allocation and management structure as of June 30, 2026.

Asset class/Strategy	Previous target allocation as of June 30, 2025	Current target allocation as of June 30, 2026	Policy range	Actual allocation as of June 30, 2026
Public Equity[1]	40.0%	39.0%	+/- 8.0%	43.4%
Real Estate[1]	15.0%	15.0%	+/- 5.0%	11.9%
Private Equity[1]	14.0%	14.0%	+/- 5.0%	13.6%
Fixed Income	13.0%	13.0%	+/- 5.0%	12.3%
Risk Mitigating Strategies	10.0%	10.0%	+/- 5.0%	8.5%
Inflation Sensitive	6.0%	7.0%	+/- 5.0%	7.0%
Cash/Liquidity	2.0%	2.0%	0 - 5.0%	1.2%
Collaborative Strategies[1]	0.0%	0.0%	0 - 5.0%	2.0%
Strategic Overlay	0.0%	0.0%		0.1%
TOTAL ASSET ALLOCATION	**100.0%**	**100.0%**		**100.0%**

[1] Includes Sustainable Investment and Stewardship Strategies investments totaling $3.9 billion.

Bond proceeds investment is excluded from the asset allocation table and asset allocation process that is approved by the board. All excess monies from the MPP Program and TDCF are invested into the SMIF, which is a pooled investment program administered by the California State Treasurer.

6. Fair value measurements

The fair value of a financial instrument is the amount that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date (the exit price). Fair value is a market-based measurement, not a CalSTRS-specific measurement; hence, valuation assumptions reflect those that market participants would use to price assets and liabilities at the measurement date.

U.S. Generally Accepted Accounting Principles (GAAP) as promulgated by GASB establish a hierarchy that prioritizes and ranks the inputs to valuation techniques used to measure fair value based on observability. Market price observability may be affected by a number of factors, including the investment type, investment-specific characteristics, state of the marketplace, and existence and transparency of transactions between market participants.

CalSTRS follows the fair value measurement and disclosure guidance under U.S. GAAP, which establishes a hierarchical disclosure framework. This framework prioritizes and ranks the level of market price observability used in measuring investments at fair value. U.S. GAAP also allows investments to be valued at cost or net asset value (NAV). The Fair Value Leveling Hierarchy table on the following page presents CalSTRS' investments at their fair value level but also includes certain investments at cost or NAV to reconcile total investments to the schedule of investments in Note 5.

Investments with readily available active quoted prices or for which fair value can be measured from actively quoted prices in an orderly market generally will have a higher degree of market price observability and a lesser degree of judgment used in measuring fair value. In all cases, an instrument's level within the hierarchy is based upon the market pricing transparency of the instrument and does not necessarily correspond to CalSTRS' perceived risk or the liquidity of the instrument.

Assets and liabilities measured at fair value are classified into one of the following categories:

Level 1 – Fair value is determined using unadjusted quoted prices in active markets for identical assets or liabilities accessible on the measurement date.

Level 2 – Fair value is determined using quoted prices in inactive markets or significant observable inputs (including, but not limited to, quoted prices for similar investments, interest rates, foreign exchange rates, volatility and credit spreads), either directly or indirectly. These inputs may be derived principally from, or corroborated by, observable market data through correlation or by other means.

Level 3 – Fair value is determined using unobservable inputs, including situations where there is little market activity, if any, for the asset or liability.

The fair value hierarchy level within which a fair value measurement falls is determined based on the lowest level input that is significant to the fair value measurement. The availability of valuation techniques and observable inputs may vary and is affected by factors such as the type of security, whether the security is established in the marketplace and market liquidity. Inputs used to measure fair value may require significant judgment or estimation, and CalSTRS may use models or other valuation methodologies to estimate fair value. Accordingly, the degree of judgment exercised by CalSTRS in estimating fair value is greatest for assets and liabilities categorized in Level 3.

The $676.1 million in securities sold short are not represented in the fair value leveling hierarchy table because they represent obligations to deliver borrowed securities to a lender. The obligations were valued using Level 1 measurements in the fair value hierarchy as of June 30, 2026.

Level 1 measurements are generally valued at the official closing price (usually the last trade price) or the last bid price on the security's primary exchange. Such investments generally include common stocks, REITs, depository receipts and mutual funds.

Level 2 measurements are generally valued using indicative prices from vendors, brokers or ask prices. These indicative measurements often use matrix pricing, the Black-Scholes-Merton model or a lattice model and incorporate observable inputs such as yield, prepayment speeds, credit spreads, volatility curves or currency curves. Such investments generally include debt securities, bonds and over-the-counter derivative instruments. Other factors such as infrequent trading, inactive market or adjusted quoted prices may also result in Level 2 measurements.

Level 3 measurements are generally valued using significant inputs that are unobservable to the marketplace. This may occur if an investment is illiquid or is internally estimated. For CalSTRS, such investments primarily include directly held real estate. Properties are appraised using discounted cash flows, income capitalization, adjusted comparable sales and replacement cost (if recent) methods. The method chosen is the one most relevant to how an investor would assess a property as a potential buyer. Additionally, debt associated with real estate properties is valued using income approach methods such as cash equivalency (gross method) or leveraged equity (net method).

CalSTRS measures certain investments that do not have a readily determinable fair value using NAV as a practical expedient. These investments are generally structured as limited partnerships with an investment manager and are created by raising pools of capital from investors that will be invested according to one or more specific investment strategies. Investors commit capital to the fund, and as the investment manager identifies investment opportunities, the committed capital is called to purchase the investments.

NAV is calculated using measurement principles similar to investment companies. CalSTRS updates the NAV for cash contributions, cash distributions and changes in the fair value of the underlying investments using capital account statements and estimates if the NAV is not updated as of the reporting date. CalSTRS does not currently have plans to sell any of these investments before their stated term.

The following table displays information regarding investments that use NAV per share (or equivalent) as their fair value measurement:

NAV practical expedient

(dollars in thousands)

	Fair value June 30, 2026	Total unfunded commitments	Redemption frequency (if currently eligible)	Redemption notice period

TOTAL INVESTMENTS MEASURED AT NAV	**$139,714,372**	**$31,966,198**		

1 This category includes private equity and debt funds that invest in privately held debt. CalSTRS' investment in each fund is generally not subject to redemption and is normally returned through distributions as a result of the liquidation of the underlying assets over a weighted-average period of approximately 11 years as of June 30, 2026.

2 This category includes funds that invest directly in real estate and real estate-related assets, including retail, industrial, office, residential and hotels. Generally, CalSTRS' investment in each fund in this category may not be subject to redemption and is normally returned through distributions as a result of the liquidation of the underlying assets over a weighted-average period of approximately four years as of June 30, 2026.

3 This category includes co-investment vehicles that invest in privately held debt. CalSTRS' investment is generally not subject to redemption and is normally returned through distributions as a result of the liquidation of the underlying assets over a weighted-average period of approximately 10 years as of June 30, 2026.

4 This category includes funds that invest in direct lending, open-ended funds that invest directly in real estate loans, and funds that focus on lending to and investing in U.S. technology-related companies, particularly software. Investments representing 84.5% in this category can be redeemed quarterly upon written notice. The remaining 15.5% of the value of the investment in this category can be redeemed at the end of a three-year or rolling three-year period and are normally returned through distributions as a result of the liquidation of the underlying assets.

5 This category includes private equity funds that invest in nonmarketable securities of private companies, which ultimately may become public in the future and whose strategies include leveraged buyouts and venture capital. Generally, CalSTRS' investment in each fund in this category may not be subject to redemption and is normally returned through distributions as a result of the liquidation of the underlying assets over a weighted-average period of approximately nine years as of June 30, 2026.

6 This category includes funds that include investment strategies with structural aspects that provide improved diversification and potential protection in negative equity markets. Investments representing 87.6% and 7.2% in this category can be redeemed monthly and quarterly, respectively, upon written notice. The remaining 5.2% of the value of the investments in this category is subject to a lockup period before a one-time full redemption is permissible.

7 This category includes private assets funds and funds that invest strategically in publicly traded equities of companies on U.S. and non-U.S. exchanges to achieve capital appreciation and income. The funds in this category are generally subject to a lockup period before redemption is permissible. Investments representing 7.4%, 4.5%, 6.9% and 2.3% of the value of investments in this category can be redeemed daily and at the end of a one-year, two-year, or a three-year period, respectively. The remaining 78.9% of the value of the investments in this category is not subject to redemption and is normally returned through distributions as a result of the liquidation of the underlying assets.

8 This category includes funds that invest primarily in equities, fixed income securities, opportunistic and other funds. Investments representing 48.5% and 51.5% in this category can be redeemed daily and quarterly, respectively, upon written notice.

9 This category includes funds that invest indirectly in real estate and real estate-related assets, including retail, industrial, office, residential and hotels. Generally, CalSTRS' investment in each fund in this category may not be subject to redemption and is normally returned through distributions as a result of the liquidation of the underlying assets over a weighted-average period of approximately six years as of June 30, 2026.

10 This category includes open-ended funds that invest directly in real estate and real estate-related assets, including retail, industrial, office, residential and hotels. Investments in this category can be redeemed quarterly upon written notice.

Debt securities

Certain debt securities have an active market for identical securities and are valued using the close or last-traded price on a specific date. Debt securities that are not as actively traded are valued by pricing vendors using modeling techniques that include market observable inputs as well as unobservable inputs required to develop a fair value. Typical inputs include recent trades, yields, price quotes, cash flows, maturity, credit ratings and other assumptions based upon the specifics of the investment type.

Short-term investments are reported at fair value or at cost or amortized cost. For those investments that are reported at fair value, the investments are valued using similar methodologies as debt securities traded in active markets.

Bond mutual funds offered by Voya are open-ended funds that are priced daily at NAV based generally upon the exchange-traded official closing price of the securities held by the funds. CalSTRS' allocation in the Voya annuity contracts is carried at contract value, which approximates fair value.

Equity securities

The majority of equity securities held by CalSTRS are actively traded on major stock exchanges. These exchanges make information on trades of securities available daily on a last trade or official close basis. If such information is not available, other preestablished means are used to determine a price. Stock mutual funds, held in the STRP and Pension2, are open-ended funds that are priced daily at NAV by the fund sponsor based generally upon the exchange-traded official closing price of the securities held by the fund.

Alternative investments

Partnership interests are valued using their respective NAV calculated in accordance with the general partner's valuation policy as of the measurement date and are audited annually. The most significant input into the NAV of such an entity is the fair value of its investment holdings, which is typically valued on a quarterly or semiannual basis by the general partners. The valuation assumptions are based upon the nature of the investment and the underlying business. The valuation techniques vary by investment type and involve a certain degree of expert judgment.

Investments in directly held real estate assets are subject to independent third-party appraisals performed annually in accordance with the Uniform Standards of Professional Appraisal Practice. On a quarterly basis, fair values are estimated by the third-party advisor or operating partner using general market and property-specific assumptions, which are reviewed by CalSTRS' valuation consultant. Leverage may be used to enhance investment returns as set forth in the CalSTRS Real Estate Investment Policy.

Real estate investments in non-directly held limited partnership interests in commingled funds are valued by CalSTRS using the NAV of the partnership provided by the general partner. The most significant input into the NAV of such an entity is the fair value of its investment holdings. These holdings are valued using the general partners' valuation policy on a continuous basis, audited annually and periodically appraised by an independent third party as directed by the governing document for each commingled fund investment. The valuation assumptions use both market and property-specific inputs.

Derivative instruments

The fair value of exchange-traded derivative instruments, such as futures, options, rights and warrants, are determined based on the quoted market prices or mean prices. The fair value of derivative instruments that are not exchange traded, such as swaps, is determined by external pricing services.

Futures contracts are exchange-traded financial instruments that derive their value from underlying securities, indices or reference rates and are marked-to-market at the end of each day. The fair value of futures is accounted for as unrealized appreciation or depreciation until the contract is closed.

The fair value of the foreign currency forward contracts is the unrealized gain or loss calculated based on the difference between the specified exchange rate and the closing forward rate as of the reporting period.

7. Loans and bonds payable

As of June 30, 2026, CalSTRS' outstanding debt obligations consist of amounts under the Master Credit Facility Portfolio, the Series 2019 Bonds and the Series 2022 Bonds.

Master Credit Facility Portfolio

CalSTRS Master Credit Facility Portfolio consists of unsecured revolving lines of credit and unsecured term loans. The proceeds from the Master Credit Facility Portfolio provide the source of funds for managing capital flows of investment strategies.

As of June 30, 2026, the total lender commitments available under the credit facilities was $9.4 billion. The principal amount of draws and repayments for the fiscal year ended June 30, 2026, were $2.6 billion and $2.7 billion, respectively. As of June 30, 2026, there was approximately $6.1 billion of principal outstanding under the credit facilities, while approximately $3.3 billion remained available. These credit facilities will mature between June 2026 and December 2028, although certain instruments may have the option to extend.

Pursuant to the terms and conditions of the loan agreements, upon an event of default, all outstanding amounts shall become due immediately, and any commitments of the lenders to fund additional borrowings shall automatically terminate if CalSTRS is unable to make the required payments. The loan agreements may also contain a subjective acceleration clause that allows the lender to accelerate payment of the principal amount to become immediately due if the lender determines, with reasonable judgment, that a material, adverse change occurs.

Bonds payable

In December 2019, CalSTRS issued $340.6 million ($272.6 million par and $68.0 million original issue premium) in tax-exempt lease-revenue green bonds (Series 2019 Bonds) to finance the construction of the expansion to CalSTRS' existing headquarters. The Series 2019 Bonds, officially titled “California Infrastructure and Economic Development Bank Lease Revenue Bonds (California State Teachers’ Retirement System Headquarters Expansion), Series 2019 (Green Bonds – Climate Bond Certified),” were issued through a conduit issuer, the California Infrastructure and Economic Development Bank (IBank), a public instrumentality of the State of California, that provides financing for business development and public improvements.

In December 2022, CalSTRS issued $16.2 million ($15.6 million par and $0.6 million original issue premium) in tax-exempt lease-revenue green bonds (Series 2022 Bonds) to complete the construction of the expansion to CalSTRS' existing headquarters and to pay issuance costs of these bonds. The Series 2022 Bonds, officially titled "California Infrastructure and Economic Development Bank Lease Revenue Bonds (California State Teachers' Retirement System Headquarters Expansion), Series 2022 (Green Bonds – Climate Bond Certified)," were also issued through the IBank.

The financing transaction is structured as a lease-leaseback transaction, whereby CalSTRS leased the project site to the IBank pursuant to a site lease, dated as of December 1, 2019, and then contemporaneously leased back the project site and the newly constructed building from the IBank pursuant to a facility lease dated December 1, 2019 (amended on December 1, 2022, to facilitate the issuance of the Series 2022 Bonds), in exchange for annual base rental payments.

The annual base rental payments are in an amount sufficient to pay, when due, the annual principal and interest payments (debt service) of the Series 2019 and Series 2022 bonds.

For the fiscal year ended June 30, 2026, CalSTRS made total debt service payments of $18.4 million (consisting of approximately $5.5 million principal payments and $12.9 million interest payments) toward the Series 2019 Bonds. For the Series 2022 Bonds, CalSTRS made total debt service payments of $0.9 million (consisting of approximately $0.3 million principal payments and $0.6 million interest payments) during the fiscal year ended June 30, 2026.

As of June 30, 2026, the Series 2019 Bonds consisted of $113.0 million in serial bonds with interest rates at 5.00% and various maturity dates through 2039, and two term bonds in the amounts of $63.1 million and $80.5 million with interest rates at 5.00% and maturing in 2044 and 2049, respectively. The effective interest rates of the outstanding bonds range from 1.25% to 2.21%.

As of June 30, 2026, the Series 2022 Bonds consisted of $8.0 million in serial bonds with interest rates ranging from 4.00% to 5.00% and various maturity dates through 2041, and three term bonds in the amounts of $2.2 million, $1.6 million and $2.7 million with interest rates at 4.00% and maturing in 2044, 2046 and 2049, respectively. The effective interest rates of the outstanding bonds range from 2.36% to 4.11%.

Generally, CalSTRS is considered to be in default if it fails to pay the principal of and interest on the outstanding bonds when due and payable. If an event of default has occurred and is continuing, the principal of the Series 2019 and Series 2022 bonds, together with the accrued interest, may be declared due and payable immediately.

Bond activity for the Series 2019 and Series 2022 bonds for the fiscal year ended June 30, 2026, is summarized as follows (dollars in thousands):

	Balance as of June 30, 2025	Increases	Decreases	Balance as of June 30, 2026	Due within one year
Series 2019 Bonds - principal	$262,150	$–	($5,545)	$256,605	$5,765
Series 2019 Bonds - original issue premium	55,278	–	(2,295)	52,983	2,295
Series 2022 Bonds - principal	14,780	–	(325)	14,455	345
Series 2022 Bonds - original issue premium	541	–	(22)	519	22
Bonds payable, net	**$332,749**	**$–**	**($8,187)**	**$324,562**	**$8,427**

Future debt service payments for the combined Series 2019 and Series 2022 bonds for each of the five fiscal years subsequent to June 30, 2026, and thereafter are presented below (dollars in thousands):

Fiscal year ending June 30	Principal	Interest	Total debt service
2027	$6,110	$13,293	$19,403
2028	6,415	12,981	19,396
2029	6,735	12,651	19,386
2030	7,070	12,307	19,377
2031	7,425	11,945	19,370
2032–2036	43,085	53,619	96,704
2037–2041	54,905	41,522	96,427
2042–2046	69,890	26,161	96,051
2047–2050	69,425	7,080	76,505
TOTAL	**$271,060**	**$191,559**	**$462,619**

8. Contingencies

CalSTRS is involved in litigation relating to various matters. In the opinion of management, after consultation with legal counsel, the outcome of these matters is not expected to have a material adverse effect on CalSTRS' basic financial statements.

9. Commitments

In connection with the purchase of partnership interests under various investment portfolios, CalSTRS has remaining unfunded commitments of approximately $40.4 billion as of June 30, 2026.

The following table depicts the unfunded commitments by asset strategy:

Asset class/Strategy	Unfunded commitments (dollars in thousands)
Collaborative Strategies	$2,836,704
Fixed Income	2,676,310
Inflation Sensitive	2,896,772
Private Equity	23,623,483
Real Estate	5,903,262
Sustainable Investment and Stewardship Strategies	2,435,159
TOTAL	**$40,371,690**

These unfunded commitments include agreements for acquisitions not yet initiated, which are not included in the NAV practical expedient table in Note 6.

Medicare Premium Payment Program

Under current board policy, assets are set aside from the future employer contributions to the DB Program to fund the MPP Program. Based on the funding actuarial valuation for the DB Program, as of June 30, 2025, the assets set aside are equal to the actuarial obligation of the MPP Program, less the value of any assets already in the program, and future employer contributions committed to funding the MPP Program totaled $184.6 million. This, along with existing assets of the MPP Program, equals the projected cost of the program.

This amount is a funding measure that assumes the value of these contributions will be available to fund the MPP Program benefits in future periods, as the assets currently in the program are not sufficient to fund the projected future benefits. This differs from the net OPEB liability as of June 30, 2026, of $207.1 million, which was measured in accordance with GASB Statement No. 74 and represents the actuarial present value of projected benefit payments that is attributable to the MPP Program participants.

2019	10,790	10,968	5,633	5,335	10,968	(178)	35,805	30.6%
2018	9,577	7,654	4,857	2,797	7,654	1,923	34,753	22.0%
2017	7,959	6,638	4,160	2,478	6,638	1,321	34,126	19.5%

1 Excludes $9.0 million, $8.2 million, $8.4 million, $8.2 million, $8.1 million, $13.7 million, $14.7 million, $10.7 million, $10.3 million and $13.3 million for fiscal years 2025–26, 2024–25, 2023–24, 2022–23, 2021–22, 2020–21, 2019–20, 2018–19, 2017–18 and 2016–17, respectively, in contributions to separately finance specific liabilities, such as benefit enhancements, of an individual employer.

2 Includes employer contributions under California Education Code sections 22711, 22713, 22905, 22950, 22950.5, 22951, 24260, 26503 and 26504.

3 Includes state contributions under California Education Code sections 22954, 22955 and 22955.1 as well as Public Resources Code section 6217. State contributions for fiscal years 2021–22, 2020–21, 2019–20 and 2018–19 include supplemental contribution payments from the state of $583.7 million, $297.0 million, $1.1 billion and $2.2 billion, respectively.

Methods and assumptions used in calculations of actuarially determined contributions

The actuarially determined contribution (ADC) for the STRP for 2026 presented in this schedule of pension contributions from employers and nonemployer contributing entity was determined based on the assumptions used in the June 30, 2024, funding actuarial valuation. The following actuarial methods and assumptions were used to determine the ADC:

Actuarial methods for the STRP

Actuarial cost method	Entry age actuarial cost method
Amortization method	Level percentage of payroll, closed
Amortization period	Ending June 30, 2046
Asset valuation method	Adjustment to fair value

Actuarial assumptions for the STRP[1]

Investment rate of return	7.00%[2]
Interest on accounts	3.00%
Wage growth	3.50%
Payroll growth	3.25%
Consumer price inflation	2.75%
Postretirement benefit increases	2.00% simple

1 The assumptions shown are for the ADC of the Defined Benefit (DB) Program. The ADC for the fiscal year ended June 30, 2026, is the statutory contribution rate as of the June 30, 2024, funding actuarial valuation applied to actual DB Program payroll for the fiscal year ended June 30, 2026. For the Defined Benefit Supplement Program, Cash Balance Benefit Program and Supplemental Benefit Maintenance Account, the ADC reflects the contributions recognized on an accrual basis for the fiscal year ended June 30, 2026.

2 The ADC for the fiscal year ended June 30, 2026, was calculated based on the economic and demographic assumptions in place for the funding actuarial valuation as of June 30, 2024. This valuation was performed using a 7.00% assumed investment rate of return, net of investment and administrative expenses. For financial reporting purposes, the NPL (shown in Note 3 of the basic financial statements) was calculated using actuarial assumptions adopted in 2026, which included an assumed rate of return of 7.10%, net of investment expenses but gross of administrative expenses.
